

JoyDew Call - Moish to meet with Olga and her team

• Jun 12, 2026, 01:54 PM - 03:05 PM • okubli@modus-soft.com • Google Meet

Viktoria Galas • 00:00

Happy Friday.

Moish Tov • 00:02

Happy Friday. Are you?

Viktoria Galas • 00:06

Yeah, it's Happy Friday for me too.

Moish Tov • 00:11

Good.

Viktoria Galas • 00:14

End of the working week is always a good yeah when I work with the uh with people from Ukraine uh usually uh in my morning they're like oh it's the end of the Friday I'm so happy and a guy no no no it's just a beginning for me but I only think you know who lives in the future and who lives in the past I believe we are waiting only for Olia to join us hello we have Stephan on the call just a teaser for today's meeting Stephan prepared the great prototype we added he added some details and we would like to go through that prototype and probably to look what what are what are missing what we what you would like us to add to that prototype so you you're gonna have something tangible to show But let's let's wait. Ola. How was your week?

Moish Tov • 01:36

My week. Long.

Viktoria Galas • 01:40

Long.

Moish Tov • 01:41

Very long.

Viktoria Galas • 01:45

Any particular plans for the weekend?

Moish Tov • 01:50

Current plan is how to finish Friday.

Viktoria Galas • 01:58

Oh, okay. Fair enough. Stefan, do you have some plans for the weekend?

Stepan Fityo • 02:08

I don't know. No special plan. Just maybe take a rest and and yeah just feel feel f feel rest after the also hard weekend
And it's depend on weather because weather is also a very critical critical moment for plan weekend. Yeah.

Viktoria Galas • 02:42

It's the end of the school year or the school have already ended in Ukraine, right?

Stepan Fityo • 02:49

Yeah, school is ended for, I mean, yeah, but begin of June it's begin like camp, school camp. Children also go to regular school, but in without any score or home home task, you just go to school, learning something new, but without any, I don't know, home task, just plenty of time in school, not in home. Yeah. During this month, during this month.

Viktoria Galas • 03:32

That's nice. That's very nice. I pinned Ola in it, Teams. I hope she will join us in a 2nd . Oh, oh, she oh, um she's waiting in the lobby.

Stepan Fityo • 03:54

Maybe he used not correct link.

Olga Kubli • 04:02

She's here. Hi. Hello. Hi, Moish. Hi, Stephanie. Hi, Victoria. All good.

Olga Kubli • 04:09

How are you?

Stepan Fityo • 04:11

I'm fine, thank you.

Olga Kubli • 04:14

That's good. Good, good.

Stepan Fityo • 04:16

How are we doing?

Olga Kubli • 04:18

All good. Good.

Moish Tov • 04:19

Go next.

Olga Kubli • 04:20

We're gonna show our progress.

Moish Tov • 04:22

Go next.

Olga Kubli • 04:24

Oh, go next. Oh, yeah, Moish. I'll send you the picture of me and Giera and Sasha cheering for them in the last game.

Moish Tov • 04:36

Okay.

Viktoria Galas • 04:37

Yep, let's start. And Stepan, could you share your screen and walk us through the prototype? Oh, now we hear some background noise. Thank you. And by the way, can we record this meeting just for our internal for the review? You know, I'm not sure.

Moish Tov • 05:05

I have assembly.

Viktoria Galas • 05:09

Oh, okay.

Olga Kubli • 05:10

Assembly will not make video recording. It will make audio recording and it will make like transcription. But I guess because Stepan is showing you the prototype, it's good to have video recordings. And because you are the organizer, or Eileen, you need to press something.

Viktoria Galas • 05:32

Yeah, it's in a three-dot menu right before the end of the call meeting. Thank you so much. Thank you.

Stepan Fityo • 05:48

Okay. Okay, 1st of all, home screen, it's very similar to what I saw previously, only maybe a main changes. We can see a routine and progress of routine, which task we already done, which task we need to done. And also we can go to this today routine and edit if we need, e.g. , in this way, we can edit all this routine, add new routine if it's necessary or not. One 2nd . Yeah, it's maybe my main challenges for routine because previously I don't remember if we have this data.

Viktoria Galas • 07:02

We had only calendar on the previous prototype. So we added yeah, we added the preview of the routine and the flow how routine is created. The items for the for the daily routine is created.

Stepan Fityo • 07:22

Yeah, yeah, and yeah, also we still can see our next event if yeah also we can see this information more data detailing. I'm not sure if we can click. Oh, yeah, we can click. We can click and see more events which we have if it's necessary. Yeah. Also also main changes from previous meeting we little change assistant and combine GPS with assistant because our hypothesis assistant more helpful than just a static GPS and assistant must be must be based on this GPS and give a relevant answer connected to this child which active now. For example, if we select Emma e.g. and if we ask something to assistant assistant must be should be answer

Stepan Fityo • 08:56

In context for EMMA and assistants should know all information about EMA, e.g. , some medical document and schedule. And if assistant, if you ask something about EMMA, assistant must be answer on this question. And also assistant can suggest some another question which related to previous question or preview or answer like this. If you

see how prepare for EMP meeting next week, we got a question, we got an answer. And also we can see another suggested question which may be interested for for parents or ask Owen by manually. But e.g. , we can click on this and yeah, and assistant can give another answer and another suggestion.

Stepan Fityo • 10:13

And yeah, and he can continue during the some period during the I don't know when parents suggest to leave this assistant and go to discover another feature in application. But also if if we need to see um how it's uh gps and see is more static information user user can click on view full map and we go to the same map which we have previously and also So, for example, if the map is very, very big, user can click switch between map and list, and maybe it's more compact and yeah, and see this information, the same information, but only in list. And see all progress and next element. Yeah, if also if we click on this on this step, the user can see all this some question which we can read more detail and add note, attach, or remind, e.g. , if it's planning assumptions, schedule appointment, e.g. , and need to remind to not forget. Yeah, maybe you have some question or suggestion because I'm a little hurry, sorry, and not give you some.

Viktoria Galas • 12:04

Let's probably show one more addition to the prototype, and then we can go screen by screen and ask detail there. So, what we also add to the prototype is actually the account account to the person who logged into this application, who started this application. And the idea is that To introduce the hierarchy of users. So, we always gonna have the head of the family, just the working name, and the head of the family have rights to invite other members of the family, and also he can share the permission. For example, for the spouse, he can give the old permissions or some limited permission. Also, they can invite the head of the family can invite babysitter is also the part of the family, however, with some limit access to the application.

Viktoria Galas • 13:28

So, that wasn't previously on the design. So, this is something we also add to the prototype. So, the main items, Stepan added. Routine creation flow, how the routine works. He combined assistant with the GPS. So, based on the profile and based on the map location, I would say, also assistant is going to work. And the 3rd thing that we added is account: application users account.

Viktoria Galas • 14:19

Good. Yep, let's that is approach work if we go screen by screen and you will provide, you will say, yes, it works for me. No, let's redo this something.

Olga Kubli • 14:40

Maybe we can also share the link with Moj so we can press it himself.

Stepan Fityo • 14:46

Yeah, yeah, I can share the link after meeting and maybe it's better you discover this application yourself because I understand a lot of screen, a lot of information. It's sometimes hard to identify if it's all okay or not.

Viktoria Galas • 15:06

Yeah, the other option, we can share this link with you. You can play with the application and, e.g. , we can meet next week, earlier next week with the details and go through details. So whatever works to you, we are here for you and ready.

Moish Tov • 15:31

May I share with you something?

Viktoria Galas • 15:34

Sure. Could you, Stepan, stop sharing?

Stepan Fityo • 15:45

Ah, yeah, sure. It can also be parallel, it's no problem, but yeah, no problem.

Moish Tov • 15:51

So I, in parallel to what you're doing, I try to work with Claude. At least it can... Sure that there is something that are you have it in your demo and Something that I have over here. So, I want to make sure that we understand it. So, starting from the beginning, there are three main components of this application. So, one is the user profile, the one that you show me. That is one.

Moish Tov • 17:35

The 2nd is the GPS. And the 3rd one is what you call the market. That's the three things that we have. So, I think that on the profile itself, what I did is I broke it down for a daily routine, medical. Nutrition of food, legal. So there are like five different categories within the profile. So, what you showed me is the daily routine, which is good, is a schedule, and this is what I do every day.

Moish Tov • 18:32

But we need to have in each one of those. I'm not sure that I know how I'm not good in that. The last time that I tried to program something was about, I think that before you were born. So, I not tried to check it. The profile given the age, and the age is the one that drives the GPS questions. Let's see if it's clickable or not. But when I click on the GPS, actually, I see this.

Moish Tov • 19:28

So I see a road. And the road start at age two and going all the way to age seven. And in each milestone, like diagnosis, H2, or go to school, which is H4. That applies that the question that becomes are showing, and you can choose either to go in one of these intersections. So you can choose to go one way or any way that you want to go. And it will show you that you chose to go not through the green, but through the ground. And that's the question that you ask, that need to be in the back end of the piece.

Moish Tov • 20:36

The visualization is important because it is It's not clear that the parent, this is a market, is the parents. It makes sure that they look not only in today, but they look into five years now. So when I click in this demo, I click on the GPS, it shows me the GPS like that. And when I it's supposed to do it, that when I hover on any age, it will tell me, okay, which questions I have to ask at this age or any other age. This is the question that I should ask. So the main capabilities of the GPS is

Moish Tov • 21:45

Explain the parent which question he has to ask at any time of age. And there are two ways that they can approach the questions. They can either approach it by a notification, come from the system, saying, okay, you got to this age, age four. Get notification from the system saying, okay, you have to think now about school. This is the question you want to ask. Do I want to go to a public school? Do I want to go to a school that has a special class for people on spectrum?

Moish Tov • 22:21

Do I want to go to a private school? So break down the question to the next level. Then you ask, okay, if I want to go to a public school, which question do I have to ask? And then they said, okay, you have to ask to have this service, different

services that school provide. So one service is education, but in case of people on the spectrum, I need to get Or do you have to help me with that? OT, PTS physical therapies or occupational therapies or speech therapies.

Moish Tov • 23:14

Okay?

Olga Kubli • 23:14

Yeah. Dependent support.

Moish Tov • 23:16

Yeah. So the system said, okay, you're going to ask the school if they provide these services. So then when they're going to school, they know, okay, I have to ask this kind of question. So for each age, and I want it to be at least on the 1st 30 years by year, year after year. So the parent knows what. what it can do, what the options that they have, and how to prepare to the meeting or to the event that's going into it. And that's what the GPS is doing.

Moish Tov • 24:10

I visualize it. Don't take my visualization as this is the best visualization. It is 1st time I'm working with Claude this week, so I'm not sure about it. But what I try to do is to show that life for anyone is not like a straight line that we're going. We have ups and downs, so there are curves in life. So I want that the visual will show it. And we'll show that in each age there are options that you have, and the GPS will tell you, okay, this is the option for today, but you need to think about five years down the road about question that you didn't know that you have to ask.

Moish Tov • 25:06

So this is about the GPS. Now, the GPS is integrated with the profile. Because any decision that I made, so if I made a decision that I go to public school, then the information about this public school is going to get into the profile. And I know that this is now the routine with the school. And if we decide that we want to have a connection to a school application, something that we can think about in the future. So, this is the GPS. In the actual profile, and you have to forgive me, it is not as nice as your so actually, if you look into the way that Claude did it, it did pretty much the same as that you did.

Moish Tov • 26:10

I think that you have all of this in your In your demo as well. So there is a home where you start, there is a profile, GPS, market. The vault is a place that Claude suggested to keep the documents. Actually, let's talk about document in separate time. So when you get into the application, you see exactly what you showed me. You see, this is today.

Moish Tov • 26:56

Then I can ask questions if I need to ask questions. The GPS we talk about. The banker place will have different providers, and the providers again it integrated with the profile because I want to have providers that are close to me. So, looking to the zip code and said, Okay, they've got to be 20 miles or 30 miles or 50 miles away from me. But it needs to be in geography because US is a big state and we have different states. So, if I am in New Jersey, I can send my kids usually to school in New Jersey. There are exceptions that are sending kids to out of state, but usually you stay within the state that you have.

Moish Tov • 28:14

Marketplace, schools will be in the marketplace. So part of the provider is schools. Other providers in the marketplace can be doctors, can be therapists, can be nutritionists. We just need to put a few examples. We don't need to put too much for the dead, just to show that we have it. My idea is that the way that we will control and know that we do have a good

provider is that the parent using it will be able to rate it, like on Amazon, to give one star, two stars, or five stars. So then, if I look for a dentist and I see a list of a dentist, I can see that other parents went to this dentist, they really like him, they give him five stars.

Moish Tov • 29:18

Or they didn't like him, they gave him one star. That's what we have to show the dead. We don't need to get into much more than that. One thing that you had, which is a good idea, and I haven't thought about it, it's events. So you in the journal that you show, you have a button for events, which is a very interesting idea. But that helping me said, okay, are there any events around me that I can take my kids in the afternoon or over the weekend? So I think that the only thing we have to think about if event is a standalone or event is part of the marketplace.

Moish Tov • 30:18

And I think that the decision needs to be based on usability, what is more Usable. Do you want to have five buttons on screen or we want to have three? But I will take this idea from your demo and plug it someplace, either in the marketplace or if we decide that we want to have some service. There are two features that we want to show. One feature is that we can easily upload document. So I can upload documents from my phone, image or PDF or anything, and I update it to the profile.

Moish Tov • 31:12

The way that Claude suggests over here, which I don't like, he creates like the documentation, the vault. A standalone. So they are not in context. The documentation between the context and the context is in the profile. So if this is a medical documentation, then profile, the name of my kid, medical, and then documentation, education, it will be there.

Viktoria Galas • 31:50

Yeah, and in our prototype, the document is the part of profile.

Moish Tov • 31:57

That's the right way to do it.

Viktoria Galas • 32:01

Yeah, alongside with the daily routine, medical, therapies, the education, legal.

Moish Tov • 32:09

Yes, good. So we'll have to show that we can get imaging. By the way, which tool did you use to create a DOM?

Olga Kubli • 32:31

Stephana, I think the question is to you. You are muted.

Stepan Fityo • 32:39

Ah, sorry. Yeah, we can. I don't tell you how to do it.

Moish Tov • 32:49

I guess.

Viktoria Galas • 32:50

Yeah, the question was what to do.

Moish Tov • 32:53

What kind of tool did you use? I just used this tool.

Stepan Fityo • 32:57

Yeah, yeah. I think it's also your presentation also great because I see maybe I will be a little bit change daily routine, maybe create more like schedule also. I will change GPS. And yeah, I think we can. Move to something combine your suggestion and mine and create something exactly what you want. And it's okay, it's also great when you show your opinion.

Moish Tov • 33:37

And yeah, because I tried to write it down a list of all the requirements, and then it didn't make sense to see it like that or the way that you showed it is much easier to give feedback into on how to work it out. So I think that there are going to be a combination of the two. So I spoke about the feature that we have to show document. Other feature is the notification. So if you see over here, it said, okay, there are milestones that are coming. So this is like the notification. So we have to create notification.

Moish Tov • 34:35

And my thought was maybe it will be part of the menu on the bottom, on the top, whatever we decide. that has notification. So whenever the system sends you a notification, we have a place that you go and say, okay, this is a notification that's been sent and what I'm going to do it. So the notification is the proactive way that this application helped the parents. So we spoke about adding document, which you already done, so it's good. We're talking about the notification, which I don't think that it's overly complicated. I think that the place that I need most of the help, Stefan, is on the GPS.

Moish Tov • 35:45

I try to create it the way that GPS work. Like, you know, you see a road and you know that you can go in any intersection, you can go either left, right, or straightforward.

Stepan Fityo • 36:05

I also want to ask about GPS. How stand is mostly like a tree? Yeah, when you select one option, it shows you three, no, another option, and you can click and click and click and go to your personal way for some class.

Moish Tov • 36:26

So we said that we will do in the demo, we'll do either two levels of questions or three level just to show it. And then they're going to be your AI helper, whatever name we're going to give to the AI helper. But the important thing is about the AI helper, this whatever name we're going to give it, that all the information in the profile that the AI know already. So all this information is all the time the AI learn about it. So when it gives you any kind of information, it bases on this individual with all the different things that appearing in the in the application. I don't know how to do it. I think that, Stefan, I think that what you see over here, this is as much as I can do.

Viktoria Galas • 37:41

I have one clarification question.

Moish Tov • 37:44

Sure.

Viktoria Galas • 37:46

You mentioned that you would like to have a 1st 30 years of GPS. By saying that, you mean in the prototype you would like us to present the 1st 30 years 30 years and this three for all for all these years?

Moish Tov • 38:06

We don't have to show the tree for all of them. Demo, we can show One sample early age, other sample teenage, and one sample from adulthood. The idea will be the same idea.

Stepan Fityo • 38:28

But also, next suggestion depends on what you choose. Yeah, e.g. , you have three ways. You select one way, and e.g. , we select one way on five years, and after we select this 1st option, next three suggested options based on previous selection.

Moish Tov • 38:55

Yeah, so actually, what it has to show over here, if you look into the brown, it is not that it ended, it just going from here back to the road. So instead of selecting to go straight, you selected to go through here, but you always turning back to the main road.

Stepan Fityo • 39:27

And also 1 s , I try to describe, e.g. , on 1st level, we select option one, and 2nd level we select also one option which based on previous selection. And we and 3rd level must be based on 1st level selection and 2nd selection.

Moish Tov • 39:57

And the profile.

Stepan Fityo • 39:58

And no, yeah, it's sure, it's on a profile.

Moish Tov • 40:02

Yeah. So we will show two levels and then there is the AI report that knows that we are over there. And then said, okay, I got to the public school, ask them about What kind of education program they have? Do they have a Sunday program or not? So, this is the questions. And then I will choose to go with the public school.

Moish Tov • 40:38

Okay. And then after I chose it, and my child in the public school, then on the profile, it's going to say this that was a decision that you made. So there is three decisions that the GPS help you to make a decision. And then there is a post-decision. After you made the decision, it becomes part of the profile because you made the decision and your child is doing whatever you made decision to do.

Viktoria Galas • 41:18

So instead of giving the general information, we are given the precise set of information, depends on your selection. If we decide to proceed with the public school, so the rest questions regarding the school will be based on the public school processes. Do you understand this correctly?

Moish Tov • 41:44

So there are two steps into it. Before I made the decision, I said, look, I want to look into the public school and ask the question about the public school. I said, I want to look into other public schools that have a special class to people with

autism. And then I said, okay, I want to look into a private school. So all of this is before I made the decision. After that, I make the decision. And the decision is I go with one of these schools.

Moish Tov • 42:23

So post-decision, it is just this is what you decided. Pre-decision, we want to help them to compare between the options and that any AI bot can do. We don't need to create another level of questions unless it will come. And remember, we're building a demo, so it's not that we have to build four levels of questions for each age. We just want to show the The principal, how it's working, how it helps me to make the decision. But when I made the decision, then I decided to go with the public school, and that information is stored under education in the profile that I go to public school, and this is the name of the public school, whatever information it is.

Moish Tov • 43:46

And then there is a routine change to be the routine for the public school. So you have a process that you have to make the decision. With the decision being made, then we just continue with this decision. Now, in school case, listen to the US, you select Olga, how many level of schools do we have?

Olga Kubli • 44:22

Twelve. What do you mean? Like elementary, middle, and five?

Moish Tov • 44:27

Yeah.

Olga Kubli • 44:28

I know only three, but I guess pre-K can be counted as like four levels.

Moish Tov • 44:35

There is like a kindergarten that's like four. Okay. So I have to make a decision four times which kindergarten I want to send them, then elementary school.

Olga Kubli • 44:50

Yes, in this case, yeah.

Moish Tov • 44:53

Then the next time is you decide about secondary school or middle school and after that is high school. Now we're going to show what happened on the 21. The milestone of 21 is very important. So we will show what happened in the 21, but it's going to be in the same concept. It's just going to be different questions. Because when you get to the age of 21 in the US, that's the age that you are graduating school. So people with autism, high school is until the age of 21, not the age of 18.

Viktoria Galas • 45:51

Just to confirm my understanding, so you would like the depending on the decision person made, we will show the forecast. How this GPS is gonna look?

Moish Tov • 46:08

I don't think that we can show forecast, we can just say, okay, you chose to be in the public school. When you get to the decision about secondary school, you will have to make the same decision again. So you might change your opinion.

Viktoria Galas • 46:33

You might, but private school.

Moish Tov • 46:36

So we cannot predict. We can only give the options. And for the option, I know that there is another point of decision. But the important point On the decision on secondary school. So, the decision about the school itself is the same way that you're going to decide about the 1st . You have more expertise, friends, whatever you have, that counterplace.

Moish Tov • 47:13

But there is one other thing that happened when you move to middle school. This is your kid is getting to puberty. And in the world of autism, we don't think about it. But it happened. It happened to everyone. And better you think about how to deal with this before it happened, because if you are not, you're going to be very miserable. So actually, on the 2nd milestone that it did, the middle school is not only a question about the middle school, it's a question, what should I do to prepare to my child puberty time?

Moish Tov • 48:05

Because puberty is tough on everyone. Sometimes people on spectrum that have keton spectrum say, okay, my child will not have puberty. But they do have a puberty. Everyone has. Yeah. And you have to think about it. So it's not just about the decision, because it's pretty much of the same age, age of 12, I believe.

Moish Tov • 48:35

Sometimes it can start a bit earlier or a bit later. It's not scientific, but it is a major milestone. So, major milestones like that I want to show in the demo because after you understood the decision about school, the next decision about school is going to be, okay, I learned 1st , now I have to make my selection again. Same thing in high school. So, the question that you will need to ask will not be major difference between selected each school. But if we show puberty, that's something that people don't think about, and that is coming on the GPS. Said, okay, around the age of 12, your kid will get into puberty.

Moish Tov • 49:45

And that comes, you have to get prepared for it. So we will choose like three or four on that we want to show early age around puberties and then around the time that you leave the school system and what the option that you have when you leave the school system. And that is not what we call the Cliff 21. It is the time that our kids graduate school and the bus doesn't show. And we need to make decisions of what a kid is going to do in their life. So that is a very important milestone, and we want to show it in the demo. Now, again, it's about options.

Moish Tov • 51:04

It's going to be some question that you have to ask, some option that you have. Are you going to choose one of the options that you want to have?

Viktoria Galas • 51:14

So you would like the prototype to include the real life question trees, correct? Okay.

Moish Tov • 51:25

Yes.

Viktoria Galas • 51:27

I know that you sent us some example of those questions. Yes, sir. I believe, yeah, yeah. We will apply that question to our prototype so it looks more realistic like. Got it. Okay. As a next step, I would suggest that we will send you the link to the prototype Stepan created and we will wait for your feedback because a lot of things that you mentioned, Stepan already included to the prototype.

Viktoria Galas • 52:13

Just we will need to update the GPS based on our today's conversation. And we will be looking forward to your feedback on the rest of the modules of the application.

Moish Tov • 52:36

Okay, very good.

Viktoria Galas • 52:39

Perfect. Then I would like to ask you one more question. Have you considered the revenue model for this project, for this product?

Moish Tov • 52:55

Yes.

Viktoria Galas • 52:58

Could you share it with us? Or that's not our complexity to me?

Moish Tov • 53:07

I do have a pitch day.

Viktoria Galas • 53:11

Okay.

Moish Tov • 53:13

Needs to be updated. I can send you, I can send you again. It needs update. The business model is subscription. Subscription. Yeah. So people will pay for monthly and they will have.

Moish Tov • 53:33

The low level, mid-level, high-level.

Viktoria Galas • 53:37

And the level, those tires will include the number of features, the set of features?

Moish Tov • 53:46

Yeah, so e.g. , to use the AI feature, they will have to go into at least gold tire. The AI tools cost a lot of money. So that's going to be the 2nd one. But the business model is subscription from the parents. That is the main revenue. And we're still looking to see if people that want to be on the marketplace, will they pay as well? But I will send you the current slide that we have for the projection.

Moish Tov • 54:41

It has not been updated for a while, but it is still give the idea about the business model of how we want to go to. And we're working on go-to-market strategy, right? So I will update the presentation. My deadline is the 16th of July.

Viktoria Galas • 55:08

16 of July, okay.

Moish Tov • 55:10

On July 16, I have the 1st meeting of the staff.

Viktoria Galas • 55:15

Got it. Okay, so that's good to have this deadline so we can plan accordingly. Yep.

Moish Tov • 55:25

So give us about two months. And I spoke with the investor yesterday. He was like the idea. But I'm meeting with him face to face on the 16th. So I want to have the pitch deck ready as well as the deck.

Viktoria Galas • 55:48

Do you need any help with this pitch deck?

Olga Kubli • 55:52

Yes.

Viktoria Galas • 55:55

Absolutely. Absolutely. Whatever you need, let us know.

Moish Tov • 56:01

I need help with all of the.

Olga Kubli • 56:05

I think till July 16, what we can provide is the pitch deck, this clickable prototype, like the one that Stepan created, but the one that is approved and confirmed by you that has all the features you want. And also the document that Victoria is making. It's like its investigation phase and all the requirements that are needed. And also estimation from the architect about how long it will take to actually produce it and how much money it will take. But now, with the help of AI, I assume it must be efficient.

Moish Tov • 56:58

Okay.

Olga Kubli • 57:01

Is it everything you need?

Moish Tov • 57:04

Want you I need the demo, I need the pitch tape, and I need to update the financials. That the most important things. If I have these three, then I can have the conversation with industries.

Viktoria Galas • 57:37

Perfect. So let's focus on those three the most important items. We will send you the link and we'll be waiting for your feedback. Stepan will redesign the GPS GPS and Ola, we will work on the deck for you.

Moish Tov • 58:14

I might will ask you some questions about the financials because I want that your group will be the developers of the full.

Olga Kubli • 58:29

Can you repeat, please, what you want?

Moish Tov • 58:32

I want that you and your group will be the developers. so i will need some numbers from you so i can put it in the budget yes that's okay that's what we're gonna give you how much we think it would cost who is needed and then the timeline yeah definitely okay so i will i will send you all the documents that i have you can take a look on this and i will give you feedback on the On the demo that Stefan created.

Olga Kubli • 59:28

Yeah, and thank you for the deadline. I think it helps.

Viktoria Galas • 59:35

It's motivates.

Olga Kubli • 59:36

Yeah, it's motivated.

Viktoria Galas • 59:38

Yeah, when we see the end of the now, we run.

Olga Kubli • 59:45

Yeah, it's like now, yeah. We're gonna prepare you so you'll be the fully ready to succeed.

Moish Tov • 59:57

There are more than one person that is very interested in this application. So the 16 will be the next stage. Hopefully, it will go faster so we can go into development.

Olga Kubli • 01:00:19

Sure.

Moish Tov • 01:00:20

Yeah. And on that, I think there's a question for you. Got the question, of course, time, etc., that we need to get into the business model. Okay.

Olga Kubli • 01:00:35

Okay, my.

Moish Tov • 01:00:36

Good. Last time that we spoke, we said that we might want to meet once a week.

Olga Kubli • 01:00:47

Victoria Stefan, I need your help.

Viktoria Galas • 01:00:49

Yeah, we weren't ready with the prototype. It took some time. Yeah, so we didn't want to waste your time just for the, you know.

Moish Tov • 01:01:02

That is fine. I'm just. Yeah, but not if we need to meet every week to get prepared for the 16, Eileen can arrive there.

Viktoria Galas • 01:01:20

Yeah, but now when we have the deadline in place, so of course we will try to speed up. Our work. Yes, Stefan? Because I'm committing for you right now on your behalf.

Stepan Fityo • 01:01:39

I need to think. Yeah, we try to. We try to. I think.

Viktoria Galas • 01:01:44

We will take this offline, right? Yes, yes, yes. We will take this offline.

Olga Kubli • 01:01:52

I already have an architect to do the estimates.

Viktoria Galas • 01:01:59

Yeah, that's fantastic.

Olga Kubli • 01:02:02

Okay.

Moish Tov • 01:02:04

Very good.

Viktoria Galas • 01:02:06

I think we had a great discussion.

Moish Tov • 01:02:08

Good.

Viktoria Galas • 01:02:09

Yeah, and the good action item and the next step, clear action items and the next steps.

Moish Tov • 01:02:17

Do you want me to send you the video of this meeting?

Viktoria Galas • 01:02:20

Yes, yes, please. Yes, please share with us this video and we will share. We will, I mean, by way, I'm saying Ola will send you the link to the prototype, right?

Moish Tov • 01:02:37

Which tool do you use to share?

Viktoria Galas • 01:02:41

Uh could you repeat a question, please?

Moish Tov • 01:02:43

Which tool are you using to share?

Stepan Fityo • 01:02:49

Just link, it's uh just link on this prototype. It's uh applied to GitHub. The video, because the video might be a big fan. Ah, no, no, uh video recording you mean uh it's uh Google, up from Google. Or what?

Viktoria Galas • 01:03:08

You just give Ola the access to this video and she will share the access for us. You don't need to download it and send it. It can stay on a Google Drive.

Stepan Fityo • 01:03:21

It's automatically shared to everyone who was on the meeting after this. It's not necessary to do something. It's automatically shared.

Viktoria Galas • 01:03:36

Got it, got it.

Olga Kubli • 01:03:40

Yeah, in case we will not receive it, then I'll contact.

Stepan Fityo • 01:03:45

Yeah, yeah.

Moish Tov • 01:03:48

Okay. Thank you very much. It looks very good. I think between what I played with and what it came, it a lot of similarity. So that is good. And yeah, 16, July 16.

Viktoria Galas • 01:04:08

Okay. Great, thank you so much. Yeah, thank you. Have a great weekend and the rest of the Friday.

Moish Tov • 01:04:20

I hope that we'll have a great weekend. It depends on the Knicks.

Viktoria Galas • 01:04:25

Yeah, tomorrow. Oh, guys, you have your own insights. Is it hockey? It's no, it's NBA, it's basketball. Oh, it's NBA. Sorry, sorry. I'm from Canada.

Viktoria Galas • 01:04:40

It's a hockey and it's a FIFA FAFA World Championship. Yes, that is. It started in the spring. It started yesterday.

Moish Tov • 01:04:53

And the stadium that will have the finals is about, I think, 20 minutes from my house.

Olga Kubli • 01:05:06

Are you going, Moise?

Moish Tov • 01:05:09

No, I'm not.

Viktoria Galas • 01:05:11

He's going to listen.

Moish Tov • 01:05:14

Do you know what the price of ticket is?

Olga Kubli • 01:05:16

I have no idea, Moise, but I've checked the price to the Madison Square Garden League game on Monday and it was 50,000 for four of us.

Moish Tov • 01:05:31

For the final, right now, ticket going by 15,000 sitting on the Top of the stadium.

Viktoria Galas • 01:05:40

On your backyard.

Moish Tov • 01:05:44

So I rather to watch it on TV than to go through the.

Olga Kubli • 01:05:48

Yeah, let's save the money.

Viktoria Galas • 01:05:50

Yeah. I have to jump, guys. I have another meeting in 1 min . Thank you so much for this call and for this conversation. Great job, Stepan. Thanks. Thanks a lot.

Viktoria Galas • 01:06:04

And see you soon.

Stepan Fityo • 01:06:08

Bye, everyone.

Olga Kubli • 01:06:09

Bye. Bye. Thank you.

Moish Tov • 01:06:13

How are you?

Olga Kubli • 01:06:15

I'm good, Moise. Going back and forth, but I'm good. And how are you?

Moish Tov • 01:06:22

Back and forth with what?

Olga Kubli • 01:06:25

With all the things just running around the town. Now I need to run to Gera's karate show, presentation at the end of the school year, and it's just lots of things, but I'm always good. And I wanna try to see you and Anad and the boys soon because I'm leaving to Ukraine in July in Europe. And I wanna see you soon because, yeah, I miss you.

Moish Tov • 01:07:01

Yeah, we want to. So just text Anat, she's the one that managing life.

Olga Kubli • 01:07:11

Okay. Moja, I do think that now with the AI, the development part will be must not take a lot of time and money. That's how I see it, especially when we have the prototype from Stefan and all the requirements from Victoria. So, developer has no need to go the same way.

Moish Tov • 01:07:44

Yeah, I believe so, too. I just don't know enough about it. So, you know better than I do, and I just want to put the right numbers in the plan. Your group will get nice compensation for the help that's given.

Olga Kubli • 01:08:18

Okay, okay. Yeah, and I'm happy because I found the developer who is working and interested in AI and want to do it with it because it's not that easy right now. So I'm happy very resistant to work with the AI. No, I mean the developer, the architect, like all lots of senior developers, sometimes they're not against AI, but they do not trust AI and they're still doing lots of things the old school way. So to have the developer who knows how to do the old way and is interested in the new ways is a win. So I'm happy I found.

Moish Tov • 01:09:16

It is going to be we will have to learn it. It's something new. Yes. Yes. Easier to create a demo for someone like me. But if you ask me if I know how to change anything in the code, that claude, I have no clue what it is. So it's a combination of the two.

Olga Kubli • 01:09:45

Yeah.

Moish Tov • 01:09:49

Olga, hopefully, I would like to see you before you are leaving to Ukraine again.

Olga Kubli • 01:09:55

Yes.

Moish Tov • 01:09:56

You said July, no?

Olga Kubli • 01:09:59

What?

Moish Tov • 01:10:00

You said July. You're going.

Olga Kubli • 01:10:02

I'm going July, yes. So we have a few weeks in June and the beginning of July. I don't know when it's. I'll text Tanat to see when it's easier for you.

Moish Tov • 01:10:13

But when you go to July.

Olga Kubli • 01:10:16

So I'm going 1st to Spain to leave Giera, July 8th, and then I'm going to Ukraine.

Moish Tov • 01:10:25

Okay. I have to be here until July 16. I know. I wish the plan to go to Lviv will have to wait.

Olga Kubli • 01:10:43

It's okay. We have time.

Moish Tov • 01:10:46

Yeah. Okay.

Olga Kubli • 01:10:49

Okay, take care. I'll send you the picture from Wednesday. Now you'll love. Thank you so much. Bye. Bye, Mois. Bye.
