

## JoyDew Call - Moish to meet with Olga and her team

• May 14, 2026, 09:31 AM - 10:31 AM • okubli@modus-soft.com • Google Meet

---

**Olga Kubli** • 00:01

Hello. Stepan will join us too, Mozh. Today.

**Moish Tov** • 00:07

Okay.

**Olga Kubli** • 00:09

How are you? I'm in New York. I came back yesterday at night.

**Moish Tov** • 00:17

How was it?

**Olga Kubli** • 00:19

I was super lucky while I was in Ukraine. There were no, uh, bomb— not bomb, how, how does— like rocket attacks. So I was lucky, but yet today it happened. And yeah, but I was lucky. It's green, it's warm, it's chestnuts in, in Kyiv. It's a symbol of Kyiv. And yeah, and friends, family, home.

**Olga Kubli** • 00:47

So it was good. And not enough. Yeah, not enough. It was sad to leave, but this time it, it felt like like I was there like a week ago. I still can't explain it. It was just like, I've been here, like, yeah. And Lviv is in much, much better condition than Kyiv.

**Olga Kubli** • 01:15

Yeah, Marinka, Kyiv is completely different story. Yeah, people and city, it's like, it was, it was sad. Still, still good, but it was sad.

**Moish Tov** • 01:30

Well, I'm happy that you had it, and I'm happy that you are back.

**Olga Kubli** • 01:34

Thank you, Moishe. Thank you. Oh, Stepan is here. Hello. Hi, Stepan. Welcome back. Enjoyed you.

**Olga Kubli** • 01:51

Okay, so Moishe, I can, uh, tell you what we've been doing in these 2 weeks and how. Yeah, so what we did. So we were looking for a BA who is with a good experience in healthcare and just a good BA. And it turned out we found one by Oksana Deminska recommendation. Do you remember Oksana Deminska? Yes, so Marina, yes, uh, she— Marina talked to her and our recruiter, and she's in Canada, which is very good because of time zones, and she's interested in the projects and she wants to work on it. And so how— so Marina, starting next week, uh, will give her everything she has and explain her view of the project.

**Olga Kubli** • 02:57

And the girl, her name is Victoria, will work on it. And Marina, please say if this is correct what she said, that she thinks that she can give like two options, one with the. Healthcare compliance and one like MVP without it, or no?

**Marina Yudenkova** • 03:18

Yes, not, uh, no, we just briefly talk— not, not briefly, but almost. We've talked about the project and the current state where we are and the context for almost for one hour. And I'm sorry, I can't hear you. He's just— we came to visit my parents and he just cannot stay with them yet. So no, it's not Papa. Yeah, and so the main point and the biggest benefit of Victoria's joining the team, the project, is that she is an expert in the healthcare domain specifically. That's what you need because she can bring the expertise and she knows the standards.

**Marina Yudenkova** • 04:18

She's certified as the BA, is international, she has international certificate as a BA, so she's a senior one. And also she passes HIPAA. Certification every year, and currently she's working on highly regulated healthcare project, but still she has a capacity to help us to speed up with your solution, with the discovery. So my goal now I'm going to update everything I have and gather everything we were discussed with you, Moishe, and I'm going to send it over to Victoria so she can analyze, review everything, and come back to you and continue this discovery phase, not from the beginning, but like it will be the continuation of, uh, um, how we started with you, uh, um,. I don't know what to say else.

**Olga Kubli** • 05:39

Yeah, and in parallel with it, Marina gave all the materials to Stepan, and Stepan started working on it to make like a very first, first, first like ideas of the design to show you and to use it as a starting point so you can as you mentioned that you're a visual person, and also like to guide us. And, uh, yes, Stepan can show you what, what he's already done. And that's how we see it from now on, that Victoria gonna work with the discovery phase. So at the end of this phase, which won't take too long because she mentioned, but we'll see how it goes. Yeah, we'll be ready to give you the entire package, and Stepan will be able to change the prototype.

**Moish Tov** • 06:43

Based on it.

**Olga Kubli** • 06:45

Yeah. Is that okay? Yeah, all good.

**Moish Tov** • 06:53

Uh, I don't really think that what we do is, uh, will need any kind of certification from elsewhere. It is more for privacy information. So it's fine, but I don't think that, by the end of the day, I don't think that this application will require any kind of healthcare certification or HIPAA compliance.

**Olga Kubli** • 07:49

So let, let us check it. That's why we found here. Who is experienced in it and who will be able to tell us which is, what is compliant, what is not, and also what we cannot add to the application, to the solution, in order not to be HIPAA compliant. Or what, yeah, so with your knowledge and background, we can play with it.

**Moish Tov** • 08:22

Okay. yeah yeah well whatever you you lead it so it's fine okay just uh one point it's like you know the way that we design it and thought about it and it is we try to stay away from being healthcare or anything like that that's the reason we spoke about how do we connect to other applications that applications are the ones that are already in HIPAA compliance. But we will hear.

**Olga Kubli** • 09:28

Moishe, we agree and understand, and we also don't want it to be HIPAA compliant and everything, and we want to make it as easy as it is. But in case something is HIPAA compliant and you— and this is an important part of the solution, then we need to understand it. And to be ready for it and to, to, yeah, to structure everything in order to be able to get this certification.

**Moish Tov** • 10:07

Okay, hope that we don't have to go this route.

**Marina Yudenkova** • 10:13

Yeah, or maybe, but she can, but she can help you, um, clearly. And, uh, like, she, she is an expert who can tell you, like, if we go this way, it will require, uh, HIPAA compliance. If we want to go this way, uh, it will be even more complicated because we will need to be certified. Our solution must be certified, let's say, if you want to integrate with that specific application. But if you want to avoid that one, we need to choose a third way, and I know, like, she will know, she will know how to design that way for you.

**Moish Tov** • 10:59

Okay, okay.

**Olga Kubli** • 11:05

Thank you for your trust. I, I can see that you're not, not happy with it, but we see it as the best, best way how to, to, to make it possible. Okay, thank you. And, uh, Stefan, can you show what, what you designed and explain us?

**Stepan Fityo** • 11:46

I'm muted. Do you see my screen?

**Olga Kubli** • 11:49

Yeah, we can see your screen. Yeah, and we can hear you now.

**Stepan Fityo** • 11:52

Yeah, uh, yeah, okay. Um, first of all, I want to mention about, uh, inside our, our small team, we decided to start from mobile version because, uh, it would be nice maybe start from mobile, mobile version because all people has smartphone and it's maybe more easily to share this application to end user. And if we position, position our position like help to parents and another user to get information about own children or this or another information, it's maybe easily to get this information from mobile phones than to go to front of computer, find website and start to discover the information. And but yeah, but in, in next step we can, we can create a desktop version or tablet version. It depends on in which way we decided to move. And which functionality we decided to create for end user. But anyway, I created very raw prototype for this application.

**Stepan Fityo** • 13:33

I based it on information which you provide and which we talk inside the team. Colors and other graphics elements, it can be changed and it's no problem, but it's like wireframe or very rough design to understand how this application would work and just check our, our thought and our idea. Yeah, first of all, we all— we have home screen. Where we, where we can see who is this login, like Maria. It's like maybe mother of the Emma. And also we have like this widget with children and information about this child, like how old, etc., information. Also we can switch it if, if Maria has more than one children, he can click on this button and switch between all one child if it's necessary.

**Stepan Fityo** • 14:52

If not, just hide this button, it's all. And all information link it to this child. Also below we have schedule today, for example, maybe we have some event and the user can see what's the event and also its current stage. Maybe we move later, but it's this like GPS, GPS widget to understand on which stage now with this child. Also some, some question and also assistant. Below we can see menu of this application like Home, Event, GPS, Marketplace, and Assistance. And if you go to Event, it's a place where user can see upcoming event and maybe register on this event or not forget some important event from own calendar.

**Stepan Fityo** • 16:15

It's like place for any activities which user can go or, or see and meet, etc. Also Marketplace, how we mentioned, it's like a place when user can see. Some, some useful links like therapist, maybe some, some, some therapists which help to understand some aspect. Also maybe special school which know how to work with kids correctly, and maybe just, just great school which, which help to develop and improve kids. Also some medical, legal, illegal, and more. It's, yeah, just like idea how we can show this, this page. Also GPS, I decided to create like.

**Stepan Fityo** • 17:25

Show in stages and way which parents with kids to go through these stages and see what's already done and what's next. I don't know, it's also a need to improve this part of the application, but it's first idea how it can look. And for example, now we on age 9 to 13, and we can go to inside and see, and see open question. Maybe some question we already cover and just go to next question. Also, we can see some tips or grouping. To this question. And also we can go to stage up and see what's the next to— about the next in stage, uh, age from 14 to 17.

**Stepan Fityo** • 18:42

And yeah, it's like this idea, uh, see all information, maybe related some resource like link on some hospital or medicine or etc., school, and we can add some ad notes, mark like done, attach some information like document or another supported materials which help to keep all this in one place. Yeah, and last one is assistant. It's like chat, chat with AI to when, when parents or users can get to work quickly, some question, ask some questions. And/or have some quick question, he can write this question in this chat and get quick information about some situation or another information. It's very quickly and very understandable how to use this application. Maybe ask about some application functionality, etc. Um, yeah, I moved very quickly through this application.

**Stepan Fityo** • 20:26

Sorry, uh, maybe you need to stop, but, uh, on some places and give you a chance to ask questions. But yeah, but if you have some question or suggestion, you can ask me and I try to answer.

**Moish Tov** • 20:57

First, it looks nice, so that is always good. Um.

**Stepan Fityo** • 21:13

Hi, Joe.

**Moish Tov** • 21:14

The 3 major components, and the first one is my child profile.

**Stepan Fityo** • 21:25

Oh yeah, I forgot about this. Show you, uh, yeah, if you— if we click on this widget We can go to inside the profile, a child profile, and see, for example, if maybe we not fill all information, it show how much need to fill to complete this. Also, we have some medical information, therapist, maybe education, education, and daily profile, document, for example, if we have some specific document which we often show for therapists or in school, we can keep this document in this application and have quickly access to this file. Yeah, it's, it's not for complete section, but yeah, it's like the raw idea of it can be look.

**Moish Tov • 22:35**

You know, that looks, uh, good. Um, I would start just one, one change, uh, the daily routine, or what you said, the daily profile.

**Stepan Fityo • 22:59**

Uh, daily routine, one second.

**Marina Yudenkova • 23:02**

Uh, it's, uh, looks like it's in a daily profile.

**Stepan Fityo • 23:06**

Routines.

**Moish Tov • 23:09**

So yeah, I'll call it daily routine. That is one thing that need to be on the top, and this is the place that The information is what is my child routine for each day. Wake up at 6 o'clock in the morning, have breakfast on 7, going to school through the day, and, uh,. For the routine, they are like— the routine is very important because this is what I'm doing every day.

**Stepan Fityo • 24:11**

Yeah, it makes sense.

**Moish Tov • 24:13**

Yeah, the legal finance education, I'm doing it once every. It's, it's a cycle, doing like the IPA doing once a year. So the, the daily routine is the important piece, and it is need to be broken down into— if we can do it with short a day the hours, what you're doing. So the one other thing that I want, and I want to focus on that because the, the profile is one of the most important things in this application, so Uh, for example, if we have— you wake up in the morning and he has to take his medication, then you click on this and it will say, okay, this is on 8 o'clock in the morning, this is a medication that he need to take. If he has a breakfast This is the type of food that they're going to eat. The population that we are working with, they do have very. Very strict type of diet, each one of them eating certain things.

**Moish Tov • 26:06**

But important that they're going to be a place that we can put— this is what, uh, your food diet, or diet for breakfast, lunch, in between. Become to be part of the daily routine. So there, as we're going through that, we will add more information to the daily routine, and I will move the daily routine up into the— when you show the profile, I will make it like the first scene on the screen. So if you click on Emma. If you can move this, call it daily routine and just move it up.

**Stepan Fityo • 27:04**

I think, I think we can move to this daily routine. Maybe it's better to put on home screen because we see a lot, and on home page it's, it's good to keep all important information on first screen. And maybe if daily routine, yeah, it's make very important for, for child, I think it's need to move on this page, but also keep maybe extended information inside the

profile, but maybe short or summary how you mention about food, some medicine. Keep on, on, on. It's great, great suggestion. Uh, I will, I will, uh, move this information to hire.

**Moish Tov • 28:04**

Now the second thing is we know what Emma age is, so we know that she's 10 years old. Then we don't need to say, okay, this is a stage, uh, she's a 10 years old. The stage is coming in the question that we want to ask in the GPS, but here it's enough to say, okay, I'm 10 years old. And in the profile, one of the things that was said, this is what the, the birth — when is your birthday? And then we will know how old is Emma. At any point of time. So there's no reason to say, okay, this is a current stage.

**Moish Tov • 29:12**

Because she's going to be in the current stage between 9 to 13. She's 10. She's going to be for 3 years. So we're just going to— there's no reason to put this on, on the screen unless it change. If it don't change for 4 years Then we come to the, uh, very important real estate of the screen. The, uh, we can move it. Yeah, okay.

**Moish Tov • 29:57**

Yeah. Uh, now if the next event is IP which is fine. Then the questions need to be related to the IP. So if I have an IP, this is my next event, then what it's What we need to get the— then prepare this for the IP. So the two questions that you have over here: what should I expect from my doctor? It's supposed to be, what should I expect from my AEP? And how should I prepare for— and this is, this is interesting because this question, the question that you had, the The second question?

**Moish Tov • 31:08**

This is, "How do I prepare for the next stage?" So, this is important point to bring. But if we look into the IP, what you want to see on the first screen is, "Help me to prepare for the IP review.". Does that make sense?

**Stepan Fityo • 31:37**

Yeah, but, uh, but yeah, but user can click on this widget and go to inside to more detail. It's not, not show it, but, uh, it just show what's next event. It's maybe not IP, another event, and just show summarize today. For example, if, if today for 14 May It just shows today you have this event, just for example.

**Marina Yudenkova • 32:08**

And if you need more— I believe Moishe was saying that the events are okay, but next segment, next block on the main screen is pick up where you left off. The first, the first question he would like to see must be related to the next event that is shown on the calendar above.

**Moish Tov • 32:42**

So yes, right.

**Stepan Fityo • 32:44**

Yeah, but I'm not sure if— okay, it's possible, but it's hard to—.

**Marina Yudenkova • 32:52**

Yeah, we just need to think the logic of those questions population, like based on what should be the priority to pick up the right question. If there are two, maybe the first one should always be connected to the nearest event, the second one connected to the stage. So it will be the mixture of both. Otherwise we can end up having only questions related to all upcoming events. Let's say if you have two in the row for today, or today and tomorrow, but it's like too— we go into too

detailed level, I think. The main idea and your desire, Moishe, is clear. Um, I believe Victoria will work with that in more details a little bit later.

**Stepan Fityo** • 33:54

Yeah, yeah, I think it's, uh, it's our, our, our main idea today, or the next step, uh, based on this first frame to understand if we move to correct way and what we need to fix or add, maybe what we forgot to add in this prototype to Yeah, to go to next step. But yeah, but it's, it's, it's good command. And I get this command to next iteration.

**Moish Tov** • 34:31

Okay. Now in the, when you go to the GPS. And if the next stage that they need to be prepared for is. It's like, uh, in each one, it's like, you know, in the— if you click on the 9 to 10, and we know that Emma is 10. Okay, so the, the question that they should ask is based on the age of Emma. Emma is going to be— is 10. and there are questions that you need to start to ask.

**Moish Tov** • 35:34

And that question, the questions are coming from the file that I gave you.

**Stepan Fityo** • 35:43

Yeah, yeah.

**Moish Tov** • 35:46

You always, there is connection between the GPS to Emma. So, Emma is 10, you need to say, Okay, she is 10, this is what you want to be...

**Stepan Fityo** • 36:04

... at this time. ... Yeah. ... Okay.

**Moish Tov** • 36:13

So, for example, a question like medication, should I consider medication, that needs to be connected to the profile, but she's already taking some medication. Okay, the, the, the concept of the GPS is the question that you should ask. So the question that you should ask, and we give them the option, we don't tell them, they will have to choose. We just tell them, okay, this is your options. So we are not trying to explain or try to make decision for them on what they want to do. So, I would start with more of the questions that are— the general question that we have in the— in the file that we sent. And what we want to do is to have the questions Right now the questions have one level.

**Moish Tov** • 38:06

And in the demo, we'll take one question and we're going to break it. One question that break into 4 questions, so it's like a tree that going into— and we have to see if it's going 2 levels or going 3 levels. And if they— by the end, it's like a question, um, Emma is dead, uh, the next big thing is going to happen to Emma. Uh, every mother know that. The next big thing for Emma.

**Marina Yudenkova** • 39:06

That's amazing period of time.

**Moish Tov** • 39:10

Yeah, the two, the two things are going to, uh,. That they were going to go through. First, she's going to be— go through puberty, which is something that every parents need to be prepared for. And the next one, at the age of 12, I believe she's going to middle school. Which, which age is moving from elementary school?

**Olga Kubli • 39:50**

11, 12. 11, 12. Yeah, I want to take two books.

**Moish Tov • 39:56**

Yeah, so we have to say to the parent of Emma, look, you have to be prepared for two things. One is. Activity, and this is a question that you want to ask about it. So you want to be ready. It is a very interesting time to anyone, and it's more interesting when you are on the spectrum. And the second, you, you have to start to look for the next school. And you want to start to look for next school a year before she end the school.

**Moish Tov • 40:43**

So, she's 10, this is exactly the time, if she's going to be 11 and going to go to middle school, that's the time to start to do it. So, that is the idea behind the question that you have to ask the GPS. The GPS tell you, We know that you're busy every day. But MI is occurring. And this is the two next things that's coming. And you have to ask question, "Okay, what do I do with MI and puberty?" It's going to give you, "How do I prepare for puberty?" And then, they're going to be up for other questions about— that you want to ask when you prepare for puberty. That would take us one level, and I suggest that to just go from the first question into the second level questions.

**Moish Tov • 41:42**

And by the end of the next level questions, that the place that the, uh, AI assistant, uh, can help the parent to understand what the option that they have. And in, in the demo, the important thing about the AI. We give a, we give a name to the AI. So, we have to name it something.

**Stepan Fityo • 42:30**

I don't know, it's, I don't think, I just call this. It's fine, it's fine. We can call, give a name later, it's no problem. Yeah.

**Moish Tov • 42:40**

It's fine. But the AI need already, he look into the profile, so he knows them. So you know that she's 10 and you know where she's living, and this is important. Geography is important. So then the AI will— if they want to ask her questions about, okay, in puberty you can do— ask this question, and I can give you the full question, but coming into it and what they choose, which questions they can— the AI assistant going to help them.

**Stepan Fityo • 43:35**

Yeah, we can work with this assistant and maybe it's a better way to just use AI assistant. And how you understand, it must be like conversation with this assistant and assistant can suggest some, some question which related to Emma in 10 years. And when, for example, mother, father, or any— anyone who care about, uh, choose this question, assistant gives this— this give answer on this question and suggest another question which related to previous question or answer which was inter— interest, uh,. To read in for, for this time or this, this period. And yeah, because maybe GPS, it's like just bank, uh, bank question when it's all static. And I don't know, maybe it's— we can create some interaction, but Main, main core or core functionalities are eAssistant, which have all information about Emma and can suggest some, some question which interested in this time.

**Moish Tov • 45:11**

Yeah, so for example, if the— she's 10, so we take the question of "Okay, you have to think about middle school." And then, the next level of questions are, "Do I want to go to a public school?" "Do I want to go to special education school?" "Do I want to go to a public school that have a program?" So, there are like 4 questions that they ask about. The school, okay? We don't tell them if special education school is better than public school, we don't. We just said, okay, ask these questions. And then they can use the AI to say, okay, explain me what is the special education school around me. They will ask the questions themselves, but we tell them, "Okay, but you should think about the different options.". Does it make sense?

**Stepan Fityo** • 46:34

Yeah, yeah, I think, yeah.

**Moish Tov** • 46:36

Okay, good. So let's take the school— it is your question to follow down the puberty and break it down to 4 other questions. And after that, there is the AI that we're going to name it something that help them to look into the school.

**Stepan Fityo** • 46:59

Okay, good.

**Moish Tov** • 47:04

Uh, now, uh, she's, uh, 10. They're looking for schools, and then we're going to the marketplace. And the marketplace, uh, because we're talking about school will show all different schools in our geography by zip code. So let's just connect it so we can have a flow from the questions in the— from the profile. We know that she is 10. The question is about the school. Give them the option, and when they look into the marketplace, yes, we keep everything that you have.

**Moish Tov** • 47:58

Keep it, it's a good thing to have. But we'll add to that screen, a list of like 3 question— schools. You have it, this one. This is the— you said this is school for K-8, and we look for school in K-12. So just move it up.

**Stepan Fityo** • 48:25

Yeah, okay. It's just, yeah, just, just as an example.

**Moish Tov** • 48:33

Connect the flow.

**Stepan Fityo** • 48:36

I see, I see.

**Moish Tov** • 48:38

Now. All the Marina mothers, okay. So for me, they are the best one to look on the screen and said, okay, it makes sense, right? Because it's pretty much the same situation or question that any mother asked that Age. There is no difference in the question, there is a difference in the options. If Olga looked into it and said, okay, okay, remember you showed me the application of it?

**Olga Kubli** • 49:36

Yeah, good insight.

**Moish Tov** • 49:39

So it makes sense to you if you look on this, it makes sense to you. That this is my, uh, that will be the, uh, if two mothers look and they said it makes sense for them and say, okay, this is good, this is what I want, that's fine. And I'm, I'm asking about the mothers because mothers are the ones that are doing most of this, uh, most of this work was done by the mothers. That's usually what the case is. So just to summarize it, now we start with the profile. We see that the age is 10, the GPS said, "Okay, you need to prepare for 2 things." We take one, the school, we break it down to 4 questions, and then it go to the AI, whatever name we're going to give it, so they can ask the AI questions. And on the marketplace, they're going to be the school that you already have, just move it up.

**Moish Tov • 51:21**

But the— the marketplace need to be connected to the questions, the order, the order of the things that you show. So in, in the pilot, we want to show the school question, so the school is the top on the marketplace. Does it make sense?

**Stepan Fityo • 51:49**

Yeah, I think, yeah.

**Moish Tov • 51:56**

Yeah, one other important thing. Actually, it's true. First is, how do you take the menu that you have on the left? How do we integrate it into the—.

**Stepan Fityo • 52:25**

In website you mean about? If you move to desktop version, for desktop version or what?

**Moish Tov • 52:31**

Look into the menu, what he said.

**Stepan Fityo • 52:33**

Ah, no, no, it's this one. No, it's not related to this application. It just, you don't need to see on this. It just says list of of screens which I created.

**Moish Tov • 52:49**

It's good. We just need to think about how it's going to be.

**Stepan Fityo • 52:55**

It's like sitemap. It's like just list of screens.

**Moish Tov • 53:00**

I really like the way that your school application has a menu.

**Stepan Fityo • 53:04**

Yeah, it's not necessary because, for example, home, it's below event. It's also below GPS. Each of each stage details, it's, if we go inside, it's just a list of pages which I created to easily to navigate if necessary to go specific page. Yeah, it's not, not needed to think about how to integrate because all these pages already in, in this prototype. It's in futures these pages become more, more and more, but now we have this nice talk pages.

**Moish Tov • 53:51**

Okay, but that's fine. The one other feature that we want to show, and you do have it. This is a document, you had it someplace.

**Stepan Fityo** • 54:13

Yeah, yeah, I have document while in vault, for example. So—. It's in profile, child profile. Profile.

**Moish Tov** • 54:24

Yeah, so, so that is, is important because that place, uh, that I got letters from school, I can upload it. Uh, so we want to show that you can do it easily. So the document vault is, is important. And, and what I like to think is how to make it easy to, to get a document into the document vault. So it can be I use my camera, it can be I sent email, or think about like different ways that we can get document into the Vault. Yeah, I agree, because we want to show like one or two of those in the demo just to show that it's going to be easy. So this is the two— you said that the menu you take care of, that's fine.

**Moish Tov** • 55:42

And on the document vault which you have, uh, we just want to show how do you get the document into the vault.

**Stepan Fityo** • 55:57

Mhm. Okay. I will create this, this part because I just create like, uh, item. And, uh, but in future work more detail with this, uh, this part of functionality.

**Moish Tov** • 56:14

Good.

**Stepan Fityo** • 56:18

Yeah, thank you for your feedback. It's helpful and yeah, and help to move forward. Yeah, application.

**Moish Tov** • 56:30

Olga, the only place that there is might be something with healthcare is that in the document port because you have updated the information. And top on the bolt, very easily. No? Great. Stefan, it looks great. Thank you very much. Thank you, Tom.

**Moish Tov** • 56:56

It's the first time I see it in real life, so it looks cool. Very nice.

**Stepan Fityo** • 57:08

Great to hear you this.

**Moish Tov** • 57:10

And if there are any questions, uh, just shoot me an email.

**Stepan Fityo** • 57:16

Yeah, sure, no problem.

**Olga Kubli** • 57:19

Yeah, and I, I also, I'm asking you, when Victoria gonna start next week, uh, so it will be still 2 weeks to our next meeting, and in case she will need some more information from your confirmations, then please reply on the emails so we can move faster.

**Moish Tov • 57:41**

Yeah, just make sure that we see Aileen on the, uh, yep, on that, then, uh,. She'll make sure that I'm answering the questions. Okay! Okay?

**Olga Kubli • 57:59**

Yeah!

**Moish Tov • 58:01**

So thank you very much!

**Olga Kubli • 58:03**

Thank you!

**Moish Tov • 58:04**

You too! Yeah! Thank you!

**Marina Yudenkova • 58:08**

Bye-bye! Okay!

**Moish Tov • 58:10**

Marina, thank you very much!

**Marina Yudenkova • 58:13**

Thank you much! Have a great day!

**Moish Tov • 58:15**

Bye! Bye!

**Marina Yudenkova • 58:17**

Bye!

**Olga Kubli • 58:21**

Moi, how are you?

**Moish Tov • 58:24**

I'm good. Uh, there is some one question I want to ask you, but I have to run to other meetings. I will, uh, okay, I will give you a call and ask you something totally different.

**Olga Kubli • 58:41**

Okay, I'm here.

**Moish Tov • 58:44**

Good.

**Olga Kubli** • 58:44

I'm happy you're happy. Bye-bye. Thank you.
