

JoyDew Call - Moish to meet with Olga and her team

• Jun 25, 2026, 09:31 AM - 10:35 AM • okubli@modus-soft.com • Google Meet

Moish Tov • 00:02

I have two.

Olga Kubli • 00:04

I think one is Victoria's.

Moish Tov • 00:07

Okay. Yeah.

Olga Kubli • 00:09

Mosh, are you using AI in your like day-to-day work?

Moish Tov • 00:15

Sure. We all.

Olga Kubli • 00:21

Yeah.

Viktoria Galas • 00:32

Hello, hello.

Moish Tov • 00:35

Hello.

Olga Kubli • 00:39

How are you?

Viktoria Galas • 00:42

I'm good. You're asking me? I'm good.

Olga Kubli • 00:47

How was your son's exam?

Viktoria Galas • 00:52

It was fine. He has two exams: science and religion.

Olga Kubli • 00:57

Wow, unusual.

Viktoria Galas • 00:59

Yeah, because here in Canada, we have two types of public school. It's a public school and Catholic school. Yeah, and it's not the private school. It's a government-funded school. Yeah, but probably because of the mix of the people and religion in Canada, you know, a lot of immigrants. So that's why they split in. We have two school boards.

Viktoria Galas • 01:36

So, when we arrived here, he went to the Catholic elementary school, and now he's in Catholic high school. And I like the school, they have uniform, the discipline, and they always high-rated schools.

Olga Kubli • 02:00

Nice. Yeah. So, okay.

Viktoria Galas • 02:13

Stepan won't join us today, only Ola and me. Stepan prepared the updates from the last from the last meeting. I will let me share my screen and I will walk us through. Okay. So we get started with the creating account with the setup in profile for the kid. Checking the milestone, what is the most prior features for us. And yeah, and we are redirecting to the map.

Viktoria Galas • 03:25

And here on the map, there are two tabs. One is the assistant and the other one is the GPS itself. When you click on any of milestone, they are splitted into the question. It's just one example. So it goes from the question to question to the three layers. Yeah, he added a couple of questions. The new one feature here is this SOS.

Viktoria Galas • 04:28

Yeah, that makes some to add some emergencies stuff and get help based on the assistant. Assistant will help you with the emergency question. Yeah, pro but still we have the daily routine and the with the documents that can be uploaded or removed Okay, let's go to the highlight that where you are currently, you can take a look for the advanced further, or you can but it's also the indicated indicator on what stage you are now and there are some details. Oops, sorry some changes to marketplace splitted by by the types, by the topics, and of course the main the account holder profile.

Viktoria Galas • 06:44

Ви хочете, щоб я залишилася на якомусь конкретному екрані?

Moish Tov • 06:51

Я працював з питаннями, які ви маєте запитати. Вони тебе послали, Оле? Вінзей?

Olga Kubli • 07:16

Так.

Moish Tov • 07:17

Мабуть, Вінзей, так.

Olga Kubli • 07:19

Ми всі їх отримали. Ви і Вікторія, і Стефан.

Viktoria Galas • 07:26

Дякую.

Moish Tov • 07:47

On the technology side, we're doing something very new over here. There is a layer for the AI LLM, which comes after you go through the different questions. And this LLM will know everything about general autism. The new thing that we added, which we call the question that we should ask, it is another layer. Which we called it the small question model. So there is a large language model, and on top of it, there is a small question model. That is part of the innovation in the technology they're doing over here.

Moish Tov • 09:09

So we need to show the if you go on the GPS at any place, we have to show that. So, what I did, 1st , do you understand what I just said? The SQM and the LLM?

Viktoria Galas • 09:40

Not really. Could you elaborate more on that, please?

Moish Tov • 09:45

So the AI tools that exist, whatever you use, they have a big database called Large Language Model. Over there, they have the come with some basics and then it's learned or you can teach it on yourself or on anything that we have. So this is the large what called LLM.

Viktoria Galas • 10:31

LLM.

Moish Tov • 10:34

Large language model. What we're adding over here is on top of this, what we call the question that you have to ask. The technology name for this is a small question model. Now, what is the why it is important? Because in any AI tool that you're going to work, in order to get anything out of it, you should know what to ask. It's a dialogue. You open ChatGPT, you said, okay, do this.

Moish Tov • 11:23

And you said something, you add. So there is like a dialogue between the user to the ChatGPT or whatever.

Moish Tov • 11:42

Додати маленьку питання Модель-Алтаваї взагалі займає багато часу від того, що використовує використовувач, тому що використовувач не знає, яке питання треба запитати, особливо в цій області.

Moish Tov • 12:09

So by adding the other layer on top of it, which is the question that you ask, the technical name of it is small question model, the technical name of it. By adding that, we make the AI tool much more focused with more knowledge. We're giving the user a lot of help because the question that he should ask, we show him, look at these questions, one layer down, two layers down, and then they're going to be the AI bot that will add at the end that he can ask any questions. Do you understand the concept?

Viktoria Galas • 13:22

Yep, I do.

Moish Tov • 13:24

Okay. So apparently, when I work on this and look into it, nobody else is doing it. So we are the 1st one to do that. And that gives us, it gives the user a lot of value because they can move very fast. I know what questions that they have. But besides that, it is for the company when we're looking to scale it. We can scale it in the autism world and we can scale it in other areas at the application or take the technology, the SQM, and scale it on the SQM.

Moish Tov • 14:26

So actually when we get into what we're doing, the question that you ask become to be a very important part. We knew it from the beginning. What I sent just get one point before. The LLM, the large language model, is huge. It has millions and millions and millions of language. So it's like millions under the reason that everybody is building data centers for the new data to move it.

Moish Tov • 15:27

Тож, я вважаю, що LLM має 100 мільйонів різних слів для літератури.

Moish Tov • 15:42

Якщо ми запитаємо у SQM, коли ми йдемо до повної продукції, Чимало питань, які будуть там, це близько 15 тисяч. 15 Тисяч від 100 мільйонів. Це створює багато ефективності для обох викликовців, а також для AI-турнику, яку ми працюємо, яка вона є.

Moish Tov • 16:25

So, what we want to show in the parallel is two things. We want to show the GPS and the new questions that you should ask that I sent, I said, okay, we don't want to build now something for 13,000 questions for this filter. We just want to show like four milestones on this map and show how you ask questions about present. I have to go to school tomorrow, how to prepare for the meeting, I go to the dr. .

Moish Tov • 17:20

So, this is one. The 2nd is the question that I sent you, they are the questions that you should ask yourself on the future.

Moish Tov • 17:38

Віра завершить школу в елементарній школі за кінець наступного року.

Viktoria Galas • 17:47

Так.

Moish Tov • 17:47

Окей? Тобто система розповідає, що ти маєш почати дивитися і вирішувати, що ти хочеш робити за кінець наступного року. А ти хочеш робити це перед кінець наступного року. Ви хочете це зробити разом? Тож важливо зараз взяти дати, які вони надавали вам, всіх вас. І п'є. Я б сказав три або чотири мілістони.

Moish Tov • 18:31

Так.

Viktoria Galas • 18:32

Так.

Moish Tov • 18:33

Tak. Tak. Tak. Tak. Tak. Tak. Tak.

Moish Tov • 18:36

Tak. Tak. Tak. Tak. Tak. Tak. Tak.

Moish Tov • 18:36

Tak. Tak. Tak. Tak. Tak. Tak. Tak.

Viktoria Galas • 18:38

Yry.

Moish Tov • 18:40

One can be, okay, I'm going to elementary school or secondary school. One of the two. Actually, secondary school is more interesting because it's not just a school, it's coming with scripture. So the question on both sides. Then the other milestone is transition. In our world, when our kids moving after school stay in the welfare area, you have to get prepared for that. And that preparation is called transition between the age of 18 to the age of 21.

Moish Tov • 19:30

And there is a lot of different things that you have to do over there, and most parents don't really know. It's a lot, it's complicated. So, we help them understand: okay, this is the question that you have. And then say, okay, I know what to do legally, financially, how to get into the welfare, all of this work. But this is not the only question that they should ask. Yes, I need to prepare for that. But then, okay, what do I want to do?

Moish Tov • 20:02

Do I want to send to college? So, we want to show that milestone. And the other milestone that they want to show is milestones that actually base on the parents. It's based on the parents' age, which is a very important point. But at the age of parents getting to 55, that age, then you can start to get from the government budget, get your child into a house. But actually, if you want to do it in the right way, there is a long waiting list for the house. In Nigeria, it's about 12,000.

Moish Tov • 21:24

And you have to start last, and then you go every year. And every year, it's only 200 people going into it. So if the parent age 55, it needs to be like parent age 55 and the child is 16. Then you can put them on the waiting list. So e.g. , Anath and myself, because we started our kids in older age, we were enabled to get them on this waiting list when they were 16, because we were past 55. So then they got the ability to go into housing when they were 28. But if we didn't do that and we just put it on the age of 25, they would have to wait another 15 years to get to the housing.

Moish Tov • 22:39

So this is like a question that you want to ask at certain age, early age. And most parents don't think about it because who think about housing when your kid is 16? You want them to live with you? Not a question that comes up. So we want to show or said three to four of these milestones. And I have to go through the question for this age. And it shows what you have to ask for now and what you have to ask for the future.

Viktoria Galas • 23:25

Okay.

Moish Tov • 23:29

So the practicality of it is what I sent you. We don't need all of it. We just need to check: okay, we take this milestone and we take the question with that. And that's what we show. We don't need to create, although they condense it and it doesn't have 13,000, it still has a lot. So implementing it into the GPS so we can show that that is very important for the pilot.

Viktoria Galas • 24:18

На яких майлестонах ви б хотіли, щоб ми запрезентували прототип?

Moish Tov • 24:26

Я сподіваюся, що першим буде діагнозація. Бо більшість батьків не знає. Діагнозація... Так, ти будеш бути на спектру.

Viktoria Galas • 24:50

Це.

Moish Tov • 24:51

Велика річ. Але потім є медичний код, який називається діагнозом. І ти маєш вибрати той, який найкращий для твоєї дитини, щоб оптимізувати сервіси, які він отримує за життям. Молоді батьки з'являють погану новість, що дитина залишилася на спектромі. Вони ще й цікаві. Вони просто сказали, що потрібно отримати сервіси зараз. Що б тільки було.

Moish Tov • 25:34

Але вони не думають, як вони можуть... І ми хочемо їм сказати, що діагнозація, так, ми знаємо, що ти емоціональна і так далі. Але це питання, яке ви хочете запитати. Тож, коли ви прийдете до лікаря, який прописує діагнозу.

Moish Tov • 25:59

get right diagnosis 001 ASD or whatever it is okay okay so diagnosis is one the 2nd milestone is a milestone of getting into the puberty and the secondary school the puberty is interesting because we don't really know when it's going to start. So it can start on the age of 12 or 11 or 13, depends on the person. Okay, so it is like a milestone that is not really connected to specific age.

Moish Tov • 26:46

You have a range, but it's going to happen. So that will be the 2nd one that I want to show because it is not like, okay, I know that I have to go to secondary school at that age and doing it. It is something that will come. You don't really know when, but you need to be prepared for it. So this is the 2nd . The 3rd one that I want to show is about

Moish Tov • 27:18

Що я вам сказав, що ви повинні почати зробити і вкласти ім'я вашого дитини на деяку листку з чимось, яке ніхто не знає.

Moish Tov • 27:34

Коли ви, батьки, приймаєтеся до 55 років, інші батьки приймають 55 років у різних часах. Але коли ви приймаєтеся до цього року, це те, що ви хочете зробити.

Viktoria Galas • 27:53

Ви говорите про будинок на початку, бо я дивлюся на вашу розділку, я хочу зрозуміти.

Moish Tov • 28:07

Для того, щоб дійти до цього будинку, треба зробити щось різноманітне. Ви маєте поставити ім'я вашого дитини, ім'я, яке відповідає владі. Тому це буде на чеканні.

Moish Tov • 28:34

Who knows it? Nobody. So we want to show this my song because it's important sometimes between the age, the kid can be 16 or it can be 26, whatever the parents get to the age. So that will be the 3rd one.

Moish Tov • 29:11

Fourth and I'm a bit debating because there is the transition, which is very important. But I do want to show that there are other things that the parents need to do post-21 and again it because of the parent age. So when the parent get into give you an example in the US, I'm not sure if you know that, but everyone that work in the US get put some money into social security. That is like pension that you build up. When you get to the age that you can start to get this money, which is around 65 for male, I think that's 62 to female. If you have some child with a special need and you start to draw it, Social Security actually doubles what it gives you because you have a child with special need. That positive side.

Moish Tov • 30:55

The other side is that if parents don't know it and they are not doing the thing that they have to do, and they start to get social security, the child will lose all the benefit. So this is like a crucial thing, but like, you know, the two of you, young, don't even think about, okay, what will happen when I have to get to this age. And that's true for everyone. So I, a bit of in the pilot, the transition is very important to show because it is crucial for the future of your child. So that is an option. The other option is to show that there are things that you need to know in later age. I don't know how long it will take to implement one set of questions one month.

Moish Tov • 32:18

So if we show the transition as well, the age of 65 for the parent, that will be nice to show that because most people just don't know it. But we want to show that GPS telling you, hey, you have to think about it. Maybe you don't want to do anything about it. One of the questions that you ask on the social security in the US is you can decide how much money you are putting in this pension, like pension that's coming from a server. So you can put something or you can maximize it. If you maximize it, then when you're getting it and it's doubled because you have some child on the So it can jump from \$35,000 a year to \$70,000 a year.

Moish Tov • 33:45

Just this piece, the social security. This is a lot of money for the parents at that age. A lot of coming on top of other pensions that they have. So I think that the question is from Stefan is If to do five milestones, it would take too much work for the pilot. We'll say with four. That's the place that we need to know from him.

Viktoria Galas • 34:34

Yeah, so currently I put as a note that we will need to have diagnosis: puberty, high school, and housing. It's four.

Moish Tov • 34:49

Puberty, transition.

Viktoria Galas • 34:53

Puberty. I just checking the document you sent, and the milestone names are just diagnosis, then IEP readiness and advocacy, puberty, high school planning, adult readiness, and post-21 preparation.

Moish Tov • 35:18

So adult readiness for age 21, the word is transition. Okay.

Viktoria Galas • 35:30

Okay, so that's age 21 is transition.

Moish Tov • 35:33

That's called transition.

Viktoria Galas • 35:36

Okay, so puberty, high school, and transition, right?

Moish Tov • 35:41

That yeah, that's Now I said, okay, there's a question that is when do I want to put my child on the housing waiting list? Then the set of questions. So if I were looking at it differently, we want to show two milestones that are age-based. So you know it's going to happen in this age. And we create age between 12 to yeah. So puberty will happen over there.

Moish Tov • 36:43

It doesn't happen when you're 20.

Viktoria Galas • 36:46

Yeah, I got it.

Moish Tov • 36:49

So this is clear age related of the child. So I want to show on the same process. Procession is start at age 18 when you graduate school and it's going until you're 21. That's what I call the preparation for adulthood.

Viktoria Galas • 37:17

Okay. We skip T1 cliff, school exit. I mean, for the prototype.

Moish Tov • 37:48

It's going to be on the map.

Viktoria Galas • 37:50

Yeah, it's going to be, yeah, definitely. That's going to be on the map. However, we won't put details there.

Moish Tov • 37:58

The other question that I prepared that you have to ask. If you're doing everything right in this age, preparing for adulthood, what we call today the 21 cliff becomes not a cliff because you've done everything and you're ready. So you know.

Olga Kubli • 38:23

I secure that it's possible.

Moish Tov • 38:25

Yeah. So the idea is if you know everything and you prepare it. Then we solved one of the biggest pain of parents to autocliff. You know what will happen, you prepare for that, they finish school, we take the vacation, the coming back, and they know exactly what's going to happen and everything is different system, but you prepare. So we leave the 21 cliff, but whether we show the demo, we said, okay, if you do one, two, three of this, we are in autoclave. The demo doesn't need to say this is part of the presentation. But if you don't do it, then yes, it is because we have the clear.

Viktoria Galas • 39:30

Yeah, got it.

Moish Tov • 39:38

Другий пункт. Ми маємо три модулі. Ми маємо GPS, один модуль, ми маємо профіль, Я вважаю, що ми хочемо використовувати назву Information Hub, тому що ми вкладаємо документи і все інше. Це інший модуль. І третій модуль, який ми називаємо збільшенням, де ви маєте різні. The different resources or providers that you can look to.

Viktoria Galas • 40:43

You use the other name, not market, right?

Moish Tov • 40:49

Yes, the name is Exchange.

Viktoria Galas • 40:54

Exchange, okay.

Moish Tov • 40:55

Yeah, it's like the NASDAQ, Exchange. Mm-hmm.

Moish Tov • 41:10

This is the pilot. When we go into actual production, we can look into different things. But we have three modules. Okay. And in the pilot, we have to show the three modules.

Moish Tov • 41:26

So one question is when you open the app, like you go to home, the 1st screen that you see, do we want on this screen to have you can go to this module, you can go to this module, you can go to this module. That is one possibility. Or the way that you showed me today, you start and it's going directly to the profile.

Viktoria Galas • 42:01

Yeah, I think the navigation for the application, the way Stepan organized is user-friendly.

Moish Tov • 42:17

Yeah.

Viktoria Galas • 42:18

Just we need to change name probably.

Moish Tov • 42:27

So, you think that this is good enough? You don't need to show it upfront?

Viktoria Galas • 42:38

Yeah, so the home is like a dashboard where you can narrow down to the details.

Moish Tov • 42:50

By the way, explain looking now into what you see. So, in Emma, already Stefan had the diagnosis ASD level two. So, actually, we have

Viktoria Galas • 43:13

Yeah, when we click on Emma name, we are going down to the child profile or we can rename it to information hub.

Moish Tov • 43:25

Yeah, but what I said is that the milestone diagnosis, already we said that the diagnosis is ASD level two. The diagnosis, okay? So to eto you the question that you want to ask, if you want to have ASD level two or you want to have something else, multiple options, the question that will lead you, then you chose ASD level two. One other thing about the diagnosis, just for a 2nd . Most people on the spectrum have multiple diagnosis. So if you can show two, not just one, that will be important. If you want to keep it the way it is right now, I'm fine.

Moish Tov • 44:36

I will just have the GPS someplace on the bottom.

Viktoria Galas • 44:58

Could you repeat, please, about the GPS? Because I was making notes and okay.

Moish Tov • 45:03

We have three modules.

Viktoria Galas • 45:05

Yep.

Moish Tov • 45:05

This module needs to be always on the bottom.

Viktoria Galas • 45:14

On the bottom. Okay, so information hubs should be a standalone icon, right?

Moish Tov • 45:22

Yes. The exchange and the GPS. That always needs to be on the bottom. Okay, got it. Go from one to the other. It looks good. This is the same link that you sent me before because I tried the link.

Moish Tov • 45:59

I tried the link and it looks a bit different. Because that looks good. This is look good. And this SOS is.

Olga Kubli • 46:13

Moj, Stephanie recommended to clear the cache. So maybe your browser takes the old version, but the link is supposed to be the same.

Moish Tov • 46:34

It looks good. If we think the question that we should ask for the milestone that I mentioned, we already have the emergency, which is nice. There are two more functionalities that we need to think about, or Stefan needs to think about it. So, one is when you go through the question, you get to the point that you can ask AI, like Charge PT, whatever we, whatever they want to, whatever easier to implement, okay? You show it by the end. So that the place that the answer comes because we only guiding on the question, we don't guiding on the answer. This is one functionality that we want to add.

Moish Tov • 47:56

And it can be ChatGPT. I don't know how it's how do you plug in into it whatever is easiest one to work with. You know, everybody knows chat GPT, so it's easier to for me to talk about it was people that said, okay, chat GPT, or we can give it A name. But the functionality, whatever it is, you go through queue from the top question to the 2nd question to the 3rd one, and you have the ability now to say, okay, I want to take more of the information and ask ChatGPT. This is one functionality that we want to show. The other functionality, you show me the document, which is important.

Moish Tov • 49:15

Is the pilot show that you can upload a document or it just shows the document?

Viktoria Galas • 49:24

It just shows the document. It doesn't, it's like upload, upload, and it's appear. You want to present the flow of uploading?

Moish Tov • 49:34

Yes. That is another functionality that is important. Then in the question that you asked, that I sent you, I added a field, and the field is why it is question important. So that's something else that we need to we want to add into it. I think we could. That is my comments.

Viktoria Galas • 50:43

Perfect. Okay. I will forward your feedback and comments to Stefan, and we will figure out how many time it will take to implement all the milestones we discussed.

Moish Tov • 51:05

Okay.

Viktoria Galas • 51:06

Yeah, and we will be back to you with the estimate, and then we can decide. Anyway, we need to fit the 14th July timeline. 16. 16. 16. Oh, sorry. Yeah, it's today for the risks.

Moish Tov • 51:30

The meeting is on the 16th.

Viktoria Galas • 51:32

Yeah. Anyway, we need to be ready earlier than 16th and got the final review and understand that we are good with what we have. So, yeah. Perfect.

Moish Tov • 51:52

Ольга, я маю кілька питань до тебе.

Viktoria Galas • 51:56

Я можу залишитися, якщо ти маєш... Я можу залишитися, якщо ти маєш... Я можу залишитися, якщо ти маєш...
Залишитися, якщо ти маєш...

Moish Tov • 52:01

Я можу залишитися, якщо ти маєш... Я можу залишитися, якщо ти маєш... Я можу залишитися, якщо ти маєш... Я можу залишитися, якщо ти маєш... Я можу залишитися, якщо ти маєш... Я можу залишитися, маєш... Я.

Moish Tov • 52:15

Можу залишитися, якщо ти маєш... Я Як довго це займе? Окей, почнемо. Перше, я вважаю, що усе розвиток буде роблено через вас.

Olga Kubli • 52:39

Дякую.

Moish Tov • 52:49

So I can add it to the document that I do have the development team to do it. Second, we need to have some kind of estimate for how long it will take to get to, how did you call it? POV or MVP.

Viktoria Galas • 53:16

MVP. MVP.

Moish Tov • 53:19

So how long it will take us to get the MVP and when we can go to market. Right now in my estimation business plan, I put a year for development.

Olga Kubli • 53:39

We hope less. We need to double-check with the architect, but we hope to do it in six months.

Viktoria Galas • 53:46

Yeah.

Olga Kubli • 53:49

But we will provide you the document where everything is described more clearly with the steps and our estimation. But what we already had in mind, it was six months.

Moish Tov • 54:02

Okay.

Viktoria Galas • 54:04

We might need some time for register with Apple as an application to download. I mean, with Apple Store, the Google Store, whatever. So we will need some time before we go to market. However, development we are targeting for six months.

Moish Tov • 54:28

Okay. I'm going to leave one here in the future.

Moish Tov • 54:39

Друге, потрібна естимація коштів, і цей кошт не лише для розвитку, він розвиткує і продовжує підтримувати і додати речі. Я роблю план на п'ять років, і в моєму плані розвиток продовжується рік після рік після рік. Тому потрібна естимація від вас, як багато це коштуватиме нам, щоб це робити. Наступна керівництва, яка буде найкращою, яку я зустрів за декілька хвилин. Другі люди думають, що тому, що є AI навички, які роблять розвиток сьогодні, що вам не потрібні розвитку, вам потрібні менші розвитку.

Moish Tov • 56:00

Це те, що маркет вважає. Моя увага на це, так, ви маєте навички, ви хочете їх використовувати, але потрібно, щоб були відвідувачі, які працюватимуть з цим. Мабуть, вони мають кращі навички, але потрібно, щоб були відвідувачі.

Moish Tov • 56:25

So it is some message that I need to craft. So when I talked to investor, I said, okay, you didn't only want developers, and everything was done by AI. It's my opinion, it's not that. I would love to hear what your team is saying about that.

Moish Tov • 56:53

They know more than I know about it. So I'm going with a document that I'm working on that explain the whole thing that we did. I'm going to send you a draft.

Olga Kubli • 57:12

Okay.

Moish Tov • 57:15

There is some numbers over there that did estimation. I will need your numbers to plug it in, but I want you to look not only you, two of you, on the story. What are we doing? How we want to go.

Moish Tov • 57:47

В документі ви бачите, що я використовую різний ім'я для цієї компанії. Я ще не зрозумів, який буде найкращим ім'ям, яке ми хочемо використовувати. Тож, я пропоную, що ви маєте запитати Стефану, скільки вам зайде, щоб зробити ще одну річ, яку ми робимо.

Moish Tov • 58:18

Я віднесу вам декретарську суму, драфт, там є цифри, скажіть, що це за цифри.

Moish Tov • 58:36

Don't look at this and say, okay, it's we want to keep it too low. No, we don't. We want to get the best people to do.

Olga Kubli • 58:52

Okay, Mosh.

Moish Tov • 58:55

The action for us.

Olga Kubli • 59:02

Okay. Mosh, and one more question about presentation. So executive summary is separate from the presentation, yes, but we can use like maybe your wording and your thoughts from the executive summary in the presentation.

Moish Tov • 59:19

The presentation, I need a lot of help. Yes, I can send you again what I'm working on, but it's I'm not good at that.

Olga Kubli • 59:40

Okay, okay, Marsh. Yeah, understand.

Moish Tov • 59:43

Thank you so much.

Olga Kubli • 59:45

Thank you.

Viktoria Galas • 59:47

Thank you.

Moish Tov • 59:48

Be safe.

Olga Kubli • 59:51

Thank you. Thank you. You too, Mo.

Moish Tov • 59:55

Bye. Bye bye.
