

JoyDew Call - Moish to meet with Olga and her team

• Jun 19, 2026, 01:18 PM - 02:23 PM • okubli@modus-soft.com • Google Meet

Stepan Fityo • 00:00

On fine 5 min , I don't just need to wait a little bit. Maybe do you have a chance to see a prototype which yes, yes, it's open. I also made some some changes after our our last call and yeah, I also tried to and also I will show you new new updaters which I which I did and we'll see I'm not I'm not great exactly GPS how you how you describe on previous screen because it's really little hard to create but but you'll see maybe I will do this later but maybe just create some idea how it's can how it can work and after that we can we can adaptate this GPS to Correct to correct design which you prefer. Can you check Lobby if Ola has waiting? I just see your my note taker. Yes, maybe, maybe okay.

Stepan Fityo • 04:28

I sent I will send Olaha to Link. Maybe she has a wrong link.

Olga Kubli • 04:55

Hi.

Stepan Fityo • 04:56

Hello.

Olga Kubli • 04:58

Hi. Thank you. Thank you, Moj. Thank you. Alien sent me the link too. I don't know why.

Stepan Fityo • 05:08

It's sometimes too very confusing because sometimes in calendar he has several more than one link on meeting and need to read. I don't know why it's in this way a bit, but anyway. Where are you?

Olga Kubli • 05:28

Today is no school day, so I had a 20 minutes break between the meetings and I ran to drop off Giera at her friend's apartment. Yeah, and I'll pick up her and her friend after 3 p.m. That's how we, yeah, with the parents, we are trying to do this shift to help out each other.

Moish Tov • 05:52

Okay. Have you been to the parade yesterday?

Olga Kubli • 05:56

What?

Moish Tov • 05:57

Have you been to the parade yesterday?

Olga Kubli • 06:00

No, and I felt like I failed as a mother because I was too afraid. Yeah, so we didn't go, but we watched online and I showed it to Geraita. Yeah, and I even to Marina, you know Marina now, and she's she's now on a different project and it's

pretty complex project. And I spent on a call with her more than 2 h yesterday. And then I started watching the parade and our mayor quoted Branson about you can think about the worst possible scenario, but you still need to go out and to do something. So I send it to you that Marina, just keep doing keep working, keep doing it.

Moish Tov • 06:52

Okay.

Stepan Fityo • 06:55

Okay, maybe I can start. Maybe I start 1st list share my version, new version, which I want to show the changes which I did during this week. And maybe after we can talk about what needs to improve, and maybe you have some comments and suggestions, maybe on based on previous prototype. Okay. Do you see my screen, I hope?

Olga Kubli • 07:31

Yes, yes.

Stepan Fityo • 07:32

Right. Yeah, 1st of all, yeah, I little reorganize home screen. I create routine more like schedule, not like task. I think it's not makes sense because it's mostly the like schedule without check marks and just see oh, I need this schedule, I need do this routine or go to some appointment, etc. It's look like more like calendar. And but but yeah, but you can but you can edit this schedule, but from setting in a child profile. And also I move document value on home screen to get quick access to this functionality.

Stepan Fityo • 08:27

Also when it's contain some some some very important important document. Also I little not little, I I redesign child profile. It's more organized and more simple. Also I create to group daily care. It's contain daily routine schedule which we can edit as each routine, delete if it's necessary, or add news. new task if it's also necessary and you decided to add new routine into to schedule

Stepan Fityo • 09:18

Also, it's a document value, how I mentioned before. And also add new options. I remember we talked about trusted person. It's person who get access to this account maybe after parents or I don't know. Or maybe also we can add this person who who have access in at this time. It's like if you need transfer account to somebody or or just like someone who care about this account and child in future, we have this this option and if necessary, we can add people who Who is trusted, people?

Stepan Fityo • 10:19

Yeah. And yeah, another option which we talked before: medicine, therapies, education, and legal and financial. All this element maybe need to see more deeply. Maybe it's need to clarify from your side if it's necessary or it makes sense this option. But yeah, but we'll see. Maybe also event and market. I'm not this anything.

Stepan Fityo • 10:58

But maybe before we go to GPS or guide, maybe you have some question and suggestion about this section, about these changes which I did before.

Moish Tov • 11:14

About the profile?

Stepan Fityo • 11:20

Yeah, about profile, about home page. I don't know. About anything which I show about trusted person, because maybe if it's a correct work or I need to will change responsible adult responsible adult.

Olga Kubli • 11:42

No, I don't know. I'm not much more.

Moish Tov • 11:53

The 1st thing I would add the GPS to the main to the menu menu on the bottom of the screen home screen, yes. On the bottom of the bottom of the screen, you have home, event, assistant, market, and account.

Stepan Fityo • 12:24

Okay, and the GPS in the middle of this menu. Yeah, I can do this. I just rename this like guide because I have two version two options for GPS. And it's a little different which you described before, but just like idea, and we'll see if it makes sense. Yeah. But yeah. I will remember the name on GPS.

Moish Tov • 12:58

So the 2nd is that the document that we can upload. Let go. Where the features that I think showed it to me.

Stepan Fityo • 13:33

Yeah, document vault is available on home screen and also it's available in inside profile about link it to the child in this yeah in this one.

Moish Tov • 13:52

It's two to side to two place when it is located from home screen and from profile child profile we do have the categories medical etc the one that you showed me yes so I think that the the best way is that if we can upload document by the categories so if I want to upload medical it will go under medical so it's either going to be here or to organize the vault by the same categories

Stepan Fityo • 15:02

I think it makes sense even about yeah, we can work in this side. Maybe I don't know what we can keep exactly what we need what we will keep in medicine. I think maybe some information by dr. or some sentences information. But maybe we can convert this section into like document vault and it contains four categories, like medicine file, therapies file, our information.

Moish Tov • 15:46

Yeah, it should be the same categories that we have on the profile and we have other questions. So if I look into the profile and I looking into if you go this is a profile yeah yeah it's profile about child okay so so instead of having the document vault either instead or in addition the document need to be showed by these categories like medical document under medical therapies under therapies education under education And I do want to show a feature of how you can upload document easily. So it can be like in medical or legal or education. But I want to show in the demo that it's easy to upload the document from the phone or from well, if you're doing it on by the way, the demo is only on the phone, or you can look on this on the phone, or you look on this on the internet.

Stepan Fityo • 17:47

Now it's all open on phone. I mean, about its prototype, similar, it's like simulation for phone. Unfortunately, I don't know, it's need to little research, but now this prototype you can't open on your phone, but you can open on browser. But it's look like in frame, like phone, and just show how it's how could be on phone.

Moish Tov • 18:34

Профіль виглядає добре, ми просто додаємо цю можливість. Ви вже показали мені, що я можу додати евангелію, яка виглядає добре. Зараз ми просто хочемо показати, що це виглядає добре. Ми просто хочемо показати, що ми можемо виплотити документ або імідж, який виглядає добре, в категорію на профілах.

Stepan Fityo • 19:20

Yeah, sure. I will work with this idea about files and little things, these things, this part of the application. And yeah, okay.

Moish Tov • 19:39

Yeah. So when the user opened the application, he need to see at least the three major major part of the application, one the profile, one the GPS, and one the market. Okay, and to that one change I will make to the bottom of the screen where you have home. So you have over the profile GPS market. But the event it can be over there as well account. I'm not sure that it's supposed to be on main screen. It can be on the side screen.

Stepan Fityo • 21:03

Well, I will see. I will see because we have this notification and okay. I just think maybe we can switch on these files because files is also very important in this application and it's good when you can access to file from 1st level of application. But yeah, but home screen I will be keep in only very repetitive or very repetitive.

Moish Tov • 21:46

I mean about yeah, I would do on

Moish Tov • 21:52

... .. GPS on market

Moish Tov • 22:15

Then we add a notification, which is good. We want to add the GPS and maybe the AI assistant. This is the guide is AI assistant.

Stepan Fityo • 22:43

Well, yeah, it's I try to combine assistant with GPS, but in this time I reach the assistant, but just show you another way how we can work with GPS. But in future, I will add this assistant and thing because it's not big functionality. I mean, about it's not hard to add this assistant and integrate to application. I think it's more harder task to create this GPS. And after when we create a GPS, it's not hard to add assistant. But anyway, okay. Let's move to GPS.

Stepan Fityo • 23:39

It's just like idea, and we'll see what do you think about this. First of all, I decided to create not like a tree how you show, but also it's also when you select some answer or question, it's have impact on next level. And all and after when you select all this question. You can see some summary. For example, we can see some question, we can see the question, we select answer and go to next step, but it's a little wrong. And 1 s , it's a lot because I add each element and each stage when it's becoming adult. And you have a question about what does a dependent look like for a young adult.

Stepan Fityo • 24:49

And you also give a call answer on this question. And you can see another question. For example, I just choose very quickly to show how it works. And when you check it, all question, you can see a summary. And maybe it must be help to parents more understand what need to do.

Moish Tov • 25:20

And this is a change that I have to make because in the question that you should ask file that I sent you

Moish Tov • 25:45

I look into it before we got into the meeting. The question, the way that I define it, is asking the question about only today. And what we want to show that you have to ask question about today, but if I have to do something today to prepare for next stage, we need to show that. But the file that I sent you doesn't do it, so I need to change this file. Це Excel-файл з питаннями, які ви запитували. Тому це не тільки питання про сьогодні, але і питання про майбутнє.

Moish Tov • 26:40

Я не послав це до вас. Тому я маю зробити цей зміниш.

Moish Tov • 26:49

And send it to you, and then you can plug it in. And then, if you go to the GPS view, the one that you show me. Yeah, it's a just go to the GPS, what you show me.

Stepan Fityo • 27:07

The actual it is a GPS. This is a GPS, yeah, yeah, GPS. It's my idea how we can create without without re. I don't easy to create, and I just think how we can create another way.

Moish Tov • 27:37

So, I'm talking about what you call the journey map.

Stepan Fityo • 27:50

Yeah, it's it's the same now. Can you click on you can change answer, e.g. ?

Moish Tov • 28:01

No, no, if you click on the on GPS journey map on the left. Ah, it's not, it's assistant, you mean about it's number eight on the left.

Stepan Fityo • 28:20

Ah, sorry, I I uh this one. Oh, it's it is it is journey map. You mean about previous? One 2nd , I just tried to open previous the link that you sent me.

Moish Tov • 28:41

Yeah, a little different. So when I click on the journey map, it shows me the actually it's well done.

Stepan Fityo • 28:53

Yeah, because you have a different build. I work in different builds. I mean, about 1 s . So the one that this one, you mean about?

Moish Tov • 29:21

Yes. So this one actually looks good.

Olga Kubli • 29:30

You like this version more, yes?

Moish Tov • 29:33

Yeah. So this one looks good. But now what I need to do, so you can edit that if we are on this stage, what are the questions that I need to ask about the future? So you don't have this in the file that I sent you. So I have to change the file so you can take it from there. So some question is going to be about today, but some question going to be: okay, I have to do something today. that going to influence the future.

Moish Tov • 30:32

So before we had the meeting, I just went through the stuff that I sent you, Olga, previously. And I did send you Excel with the question you should ask.

Olga Kubli • 30:49

Yes.

Moish Tov • 30:50

But pretty much what it is, I just copy the same question from age to age, which is incorrect. The question changes. So I have to make these changes on this file and then send it to you. So then we can show, okay, yes, you have to ask question about something for the day, but you have to ask questions about the thing that you have to do tomorrow. This is one change I have to make. The other change that I have to make is the questions. Right now, it's the same question for all ages.

Moish Tov • 31:34

But the way that I did it a long time ago, I have to go and change it because there are questions that will be different questions for any group page. So I need to do two changes on this file and send it to you. So you can just use the new set of questions. So 1st , I have to do it. If I don't do it, you don't know it.

Stepan Fityo • 32:12

Yeah, I also want to talk about its question. It's very important because from question, it's building this love and this journey map. And yeah, it would help me.

Moish Tov • 32:26

Yeah. So I take this action on me to change the file of the questions. And I will send you a new version of the questions. Now, there are going to be three changes in this file. First, there might be One or two more categories might be. Second, are going to change questions from H to H because they're different.

Moish Tov • 33:12

And 3rd , at least for I will take like three examples in where you can go from one level of the question to the 2nd level of the questions like a tree. And we'll do example for only three questions. And after that, the change that we need to do is in the application that you show me, we give some explanation or recommendation.

Stepan Fityo • 33:56

Even after after this journey, yeah?

Moish Tov • 34:00

Yeah. What we need to change is that after we get into the 2nd level of questions, instead of we explaining something, that place that Emma will answer the questions based on the profile, based on many based on the profile. So I don't want us to give any opinion about anything. The only thing that we give is: this is a question that you have to ask. And then, if you want to know more, use the AI bot to answer the questions for you. So, e.g. , over here, there is I am parenting solo, which is a very good point. Okay.

Moish Tov • 35:26

And then we put some explanation. Okay, so this is our opinion. I want to avoid our opinion. I want to have questions that you can ask about it, or you should ask about if I'm a solo parent, I want to ask two or three questions, and the answers will come from Emma based on the profile, and then the user can interact with other questions and ask it. Because we are like neutral. We're just saying we're helping you by telling you what the question that you want to ask Emma. Okay?

Moish Tov • 36:16

But we are not coming and said, we are not stating any opinion. We stay away from that.

Olga Kubli • 36:31

So, you don't want to create like any database for the AI to answer the questions. It just AI will be connected and it's like the entire universe, but we are given the right question to us.

Moish Tov • 36:48

Yes. So, you get the prompt, you know, okay, I want to ask this question. The AI already learned anything about Emma. Okay, so he knows Emma, you know where Emma lives, he knows everything about her. So, when you ask a question about it, it's about Emma. And that what we want to show. So we are staying away from saying, okay, to be a single parent in the US, we explain what it is that might be that being a single parent in Ukraine, different.

Moish Tov • 37:37

Okay. I don't want to. I don't want to explain it or give any kind of opinion about that. But if we look into the single parent, which actually is a very good point that you raise and I've thought about it, in the profile, we have to say, okay, am I a single parent? Or like what we discuss about adding the people that we want to have access to the profile, the trusted friend, or my sister, my uncle, whoever it is that's going to be using the application. And so in the profile, I'm going to define I'm single parent or I'm not. And then, when it's written in the profile, the AI that we're going to use is going to learn the profile.

Moish Tov • 38:56

So, you know, I'm a single parent. So, any answer that you're going to give me is based on Emma, whatever we know about it, and the fact that I'm a single parent.

Stepan Fityo • 39:16

Yeah, it makes sense. It definitely makes sense. And I take this information and yeah, it's and also based it on your future answer, a few future documents. I will create a new suggestion, new summary, maybe new summary.

Moish Tov • 39:38

Yeah. So it's like think about what I want to show on the prototype. By the way, how do we call it? Do we call it prototype or call it demo? What the name of this? What name do you use? Tell me what name you use.

Moish Tov • 39:55

I will use MNA.

Stepan Fityo • 39:57

We can call this like MVP, minimum value.

Olga Kubli • 40:01

No, no, no, no. MVP will be when it will be like actual application, the one when Moish talks to the investors with the funding and then it will be created. So this is.

Moish Tov • 40:15

Let's call it prototype. This is prototype, okay. This is a prototype. Okay, good. What we want to show in the prototype is like, okay, I'm coming in. I can create the profile of my child. They're going to be question.

Moish Tov • 40:38

I think that most of them are okay. I will take one more look into it if we have to add anything. I think that for the prototype, we are pretty good. And then it is, I have the profile, and I have now two options. I have an option to go into either GPS that will tell me you are here and you're going to go here. And then you can drill into and see, okay, this is the question I want to ask about today. This is a question I want to ask now about the future, which will come from the new file that I'm going to send.

Moish Tov • 41:36

And after the system tell me, okay, ask these questions. We will show just an example, two questions that we can go one level down, ask more questions, and then you can ask the AI to give me whatever options about the Emma based on the question and based on the profile.

Olga Kubli • 42:15

Окей, це звучить різнично. Так. Це має сенс? Так. Так.

Moish Tov • 42:24

Окей. Тобто в цьому випадку я маю допомогти вам зробити новий файл з питаннями. Тобто ви можете додати ці питання. І я це зроблю. Тобто це на мене. І поки я не зроблю це, то все, що ви зробите, буде добре, тільки зберігайте новий файл. У новому файлі ми будемо мати питання про сьогодні і про майбутнє.

Moish Tov • 42:58

Зараз, дякую за дискусію. Від досвіду використання, що я хочу показати у порталі, я хочу показати, що я можу дійти там на рутинній базі. Наприклад, я приїжджу до школи на рутинній базі, я маю дійти до школи на рутинній базі. Тобто, це будуть рутинні роботи, і ви маєте їх зараз. Я хочу додати до цього, я хочу запитати питання, що не рутинне. Наприклад, мій дитина мала проблеми зі зубами, і їй потрібно піти до лікаря. Зараз найголовніше, про що я маю увагу, це те, що я маю місце, де я можу кликати і сказати, що я потрібен лікарю для моєї дитини.

Moish Tov • 44:25

Але це не рутинна питання, це таке, що відбувається і я маю про це знати. Це календарний рівень. Якщо вони мають хворобу в дитині, яка почалася минулоріч, то це не календар, а я маю піти до лікаря.

Moish Tov • 44:50

So, it is not something that you can predict that will happen. If there was a routine checkup in the dentist, that will be in the calendar. But if your child has a toothpain and you want to find a dentist, you want to find now. I don't want to go through all the profile.

Moish Tov • 45:17

I want to go into the AI or something and say, okay, I need a dentist now. And based on the profile, my zip code, it will tell me, okay, you have a dentist over here, you can connect the dentist.

Stepan Fityo • 45:38

Yeah, I think it can be work with assistant, and yeah, you can ask assistant. I hope AI can base it on profile, suggest some doctors, etc. Because routine for me, it's more about a task which everyday repeat. And if it's yeah, but event, it's more like schedule event which can happen in future or in past.

Moish Tov • 46:23[illegible]**Moish Tov • 47:22**

Emergency, I need a dentist. I click on emergency and I ask a question. Event can be okay, look for a movie for the weekend.

Stepan Fityo • 47:41

Why it can be an emergency event? It's the same event, like the movie, but event I'm planning in advance.

Moish Tov • 47:52

Okay, so I know I might have, it's like you know, my kids have a routine event over the weekend. They're going to do something on Saturday, they're going to do something on Sunday, and it's week after week they're doing it. So it becomes on the schedule, on the calendar, they know, okay, I go to karate on Saturday, and after that, I'm going to eat pizza, and on Sunday, I go to the gym, and after that, I'm going to see a movie. So that's a routine. It's going to happen week after week after week. That the way that we try to put some We try to put some sanity into our chaotic life.

Moish Tov • 48:44

So if I can plan it, I will plan it, if not emergency. Emergency is something happened and I need I need a dentist because or I need I have one of school, I need a lawyer.

Stepan Fityo • 49:16

That's also another way we can't create a lot of category in R because we need to group in some very similar functionalities.

Moish Tov • 49:35

I will leave event as on the bottom of the screen, the way that it is now. I will leave the event over there. There are events, but I will add, like instead of having the account over here, which we can move into the other, I will add a button, button that call emergency. So if I have any emergencies, it doesn't matter what it is, and I need a question right now, I can click on that and ask the question. I need the dentist, or I need a lawyer, or I stuck with my car and it's broke and I need to get my kids from the car because for autistic kids, they need to have the routine. And if you stuck with your car and this is not part of the routine, it creates a problem. So that is emergency for me.

Moish Tov • 50:47

Now, we will not define the question for the emergency. It just access to the AI to say, okay, I have an emergency and then I can. Maybe later we can say, okay, the AI will ask you, okay, you have what type of emergency you have, medical. Maybe we'll do that. At the beginning, we can just have emergency that you can ask a question.

Stepan Fityo • 51:16

Okay, okay. I think it makes sense. In that side, it makes sense, okay? Yeah.

Moish Tov • 51:22

So the both type of thing that it is enough later on when we get to the actual development, we'll define each one of those how we want to see. So What I need to do is send you updated questions that you have to ask. This is I need to do. And I will try to do it before our meeting next week. Okay?

Stepan Fityo • 52:02

Yeah, sure. I'll remind you. Yeah. I also can ask you about send me previous calls or recording because I can't find, unfortunately. You can ask me a question anytime you want.

Olga Kubli • 52:21

Do you mean the previous call, Stephen?

Stepan Fityo • 52:23

Yeah, I mean the previous call in which we have in Friday also.

Olga Kubli • 52:28

On Thursday. Yeah, sure. Okay, Victoria must have it.

Stepan Fityo • 52:33

Yeah, because I hope it must be sent me on my email, but I don't know, I can't find it.

Olga Kubli • 52:40

I'll check.

Stepan Fityo • 52:42

Maybe you have a copy, it's really helped me. Yeah, and if you can also send me this recording, it's also helped me.

Olga Kubli • 52:51

I will. This recording I have.

Stepan Fityo • 52:54

Yeah, yeah, because I saw it's a note-taker, some note-taker.

Moish Tov • 53:00

Do you have a question right now that you want to ask about what?

Stepan Fityo • 53:06

No, no, I all understand what you mean. And yeah, I also will redesign this files GPS and try to add emergency button, emergency section, I don't know. And yeah, I also have a lot of work to next week based on your feedback and suggestion. And yeah, I will work in progress with this functionality which I need to add. And yeah. Okay.

Olga Kubli • 53:52

And on my side, I will add that I will remind you about the file. I'll send all the recordings to Stepan and to Victoria, this one, so she can listen to it and update what is needed to be updated in her documents. And I already spoke with the architect and he like he already has some ideas, but on Tuesday I'm meeting with him and with Victoria to connect them. And so yeah, they can just ask lots of questions to understand.

Moish Tov • 54:30

Yeah, and I think on my 1st thing I will do is the questions. So I can give it to you. Then I need to start to work on update the presentation. The presentation. And if you have someone that can help you with that, that'd be great.

Olga Kubli • 55:00

Yes, we'll do it. We'll do it. It's part of our commitment. We'll provide you with a prototype, presentation, documents and estimates.

Moish Tov • 55:10

I do have The old pitch deck, I will make some adjustment on it.

Olga Kubli • 55:23

Okay.

Moish Tov • 55:24

But that will be after I'm sending the questions to the other questions, so we can have it. By the way, did I send you this pitch deck before?

Olga Kubli • 55:39

Yes, it's where the name A-type comes from. Yes, I have it, and Victoria has it. Yes.

Moish Tov • 55:48

Okay, so that one I have to update. It was written before AI was exist.

Olga Kubli • 55:57

Yeah, well.

Moish Tov • 55:58

So we have to, I need to update it. The person that works with me on that no longer work with me, so we need to get out. So that will be the 2nd thing that I will do after I finish with the question. Okay.

Olga Kubli • 56:20

Okay. And I have the last questions. Do you like the design? I mean, like the colors, not the logic of the app, but the design. Maybe you want to change some. No? Okay.

Moish Tov • 56:37

On that, I trust you. It looks fine. I like the fact that you have this main screen on the left. You have menu. Very helpful. So on that. Whatever the design, whatever you feel that is good, it's good.

Moish Tov • 57:04

I'm not.

Olga Kubli • 57:06

Okay.

Stepan Fityo • 57:07

I don't have but but also also I want to add it. It's also it's not final design because I create this prototype. It's design sometimes hard to create because it's not really under control for me. It's maybe in future when it's all okay and you start to do this application like MVP we can create a new design and update because now our goal to understand how this application work. After that when we understand how it works we can create update design etc if it's necessary.

Moish Tov • 57:50

The design as it is right now it's fine.

Stepan Fityo • 57:53

Okay.

Moish Tov • 57:54

Okay. That actually looks fine.

Olga Kubli • 58:03

I just remembered then when you told me about the idea for the 1st time you used the word the word sexy and now you're saying fine and that's why I double check.

Moish Tov • 58:25

I'm not designer. So I look into it and said, okay, will it do the work that I need to do with this? Yes, I don't see any major thing. You know, I might ask Anna to take a look on this. Maybe she will say, change the color from green to be, I don't know, light blue. But the design to me looks fine for what we need.

Olga Kubli • 59:08

Okay. I don't.

Moish Tov • 59:11

If you have someone that knows how to do it, it's the other question. But for me, it looks okay. I don't have a comment on the design.

Olga Kubli • 59:22

Okay.

Moish Tov • 59:23

Okay.

Olga Kubli • 59:24

All good. All good.

Moish Tov • 59:26

If this is cool, sexy or not. Truly, I don't know the answer for that. Okay, yeah.

Stepan Fityo • 59:37

But anyway, in future, we can improve the design.

Moish Tov • 59:43

Yeah, right now it's good. It's not.

Moish Tov • 59:48

Я не маю ніяких коментарів на це. І я не хочу витратити дуже багато часу на це. Це більше про те, що сексуальність і культура будуть з'являтися, якщо показати швидку функціональність, щоб це зробити. Такий момент. Якщо це буде в цьому кольорі або іншому кольорі, це не так.

Moish Tov • 01:00:15

It doesn't think about it. Okay?

Olga Kubli • 01:00:19

Yeah.

Moish Tov • 01:00:19

Yeah. Good.

Olga Kubli • 01:00:22

Thank you. Have a great weekend. Marsh, I'm happy. We are moving. Thank you so much that you made it. I hope your board meeting was good too. Elim told me.

Moish Tov • 01:00:35

It's over.

Olga Kubli • 01:00:38

Okay, then you can relax now.

Moish Tov • 01:00:44

When I have a board meeting the week before, that is very busy because I have to prepare for meeting next week.

Olga Kubli • 01:01:06

Yeah.

Moish Tov • 01:01:07

Thank you for your feedback and suggestion.

Olga Kubli • 01:01:09

Yeah. Bye. Have a nice day. Bye, everyone. Bye. Bye.
