

JoyDew Call - Moish to meet with Olga and her team

• Jul 09, 2026, 01:03 PM - 02:00 PM • okubli@modus-soft.com • Google Meet

Olga Kubli • 00:04

I will text it upon no. Can you yes, Victoria, can you hear Moish?

Viktoria Galas • 00:21

Yeah, I can hear Moish.

Moish Tov • 00:35

Good.

Olga Kubli • 00:40

Yeah, maybe Stefan can show the changes. Yes, Stepan, can you? And also, Victoria can show. So I shared with Victoria the executive summary that you shared with me and she created a presentation out of it. Yeah, like so we can show you this too, so you can guide us and tell us what you like, what you want to see different, and maybe take some ideas out of it. Or maybe, yeah. Good.

Olga Kubli • 01:24

Yeah, Victoria Stepan, good.

Viktoria Galas • 01:25

Absolutely, yeah, I agree.

Stepan Fityo • 01:27

Oh, yeah, I'm not sure. I'm muted. Sorry. Hello, everyone. I said something, but I muted. Okay, I share my screen. Okay.

Stepan Fityo • 01:43

First of all, yeah, I added login screen. It's more like hello. and also wish some some wishes to to this account and it's always random wishes i don't know it's just just like very simple and i think it's uh it's good yeah and also a little uh uh home screen because I move InfoHub in menu and not necessary to have very big accent on children on home screen. I mean about this big widget, Green B widget, because it's easy to go InfoHub and read all this information about children, but it's home screen. I made more for Maria. It's like mother for of these children because it's he's here home screen and all information belong to mother or father.

Stepan Fityo • 03:02

For example, yeah, I added this this notification about have you how are you today? It's very simple. You can click grade and just just this just simple ask question. Also, is this still the next event and today routine and we can still can switch it between different children if it's necessary. And also I moved account Parents account to top right corner and you can see all this information which it was previously but but yeah but you can see again also also also I maybe mentioned about this later but also add create mobile version and you can see this version see this version from mobile it's it's just very wide because it's need to open on mobile and you can click and feel like real up I don't know it just just very quickly maybe after after sorry should it be open open mobile version or open the desktop version no no mobile I mean about if you want to open and look how it's looked from mobile you you can follow to just add to to your layer mobile and it's open mobile because If you see, it's very wide it's it looks like mobile format and not no border, mobile border without

any that's a bit confusing because we are looking at the mobile and we are looking mobile view and then you we redirect into mobile view which is uh wide so I I didn't get yeah all right okay 1 s .

Stepan Fityo • 05:19

Yeah, I just hide all these guides and hide border, mobile border, to simply open this version from mobile. Because now if you open on mobile phone by this URL, you can see all this element like guidance and borders. And yeah, it's not look like a real mobile app. But if you follow this URL, you can see similar like mobile. But anyway, you can open later and see how it's looked. And maybe it's more clearly. But anyway.

Stepan Fityo • 06:07

Also, I add also add flow how to upload file. If you click on upload document file, you can see three buttons like techie photo. It's not real, but just e.g. , e.g. , you can click and it's automatically creates this photo and you can select which folder you want to move this photo and attach. Yeah, also we have a new folder like all documents. It's all list of document from the application. Just for if you don't know which folder you need to choose, go to all document and also you can upload file from this site and select from photo library, e.g. , and from file browse the file. What next?

Stepan Fityo • 07:11

Also, yeah, I a little not completely change 1 s guide, but why it's okay, it's some little bit buggy. I don't know, because it might be ah, okay, no, yeah, I think it's okay, it's not correct to view, but anyway, uh, if you also if you open now, if you open some this this stage, uh, you can still okay, 1 s , let's see it, it's not open last last changes from from my oh yeah I ask asked about this question in in in AI and you can answer on this question or more deep to understand this question on this stage and discussing with with I AI. For example, if you click to ask to AI, you can see this question personalize to Emma and it provides some information from account and it also can easily more easily to understand the context and easily to get answer on the on on question which you want etc yeah yeah it's maybe all what I added maybe you have some question or suggestion yeah what is the question that you should ask with some which question which which I ask Aita Ayes I sent sent you a new file with the question that you should ask you about this question yeah Ah, you mean about home from home screen? Maybe no? This one?

Viktoria Galas • 09:58

No, no, the three level of questions.

Moish Tov • 10:01

The three level of questions.

Stepan Fityo • 10:06

This one. It's unto the final step. If you answer on all this question, it's generate this screen with answer some suggestion.

Moish Tov • 10:44

I mean the question that you should ask the three-level questions about this question, yeah?

Olga Kubli • 11:08

No, I think Moj is meaning the question that she shared about different stages of life of the person. Yes, Mois, and questions you should answer in order to prepare yourself, like comment this period. And you can ask any questions, but those questions are the one where the app like guides you to ask these questions and wants to point out that those questions are important to ask.

Stepan Fityo • 12:05

I know maybe it's this question. Yeah, I okay, maybe I confuse it a little bit.

Olga Kubli • 12:23

But do you understand where to add them?

Stepan Fityo • 12:31

Can you explain maybe a little bit?

Moish Tov • 12:44

On the guide screen to GPS GPS is working based on the question that you should ask.

Stepan Fityo • 13:05

Maybe we can, e.g. , if when you open the stage and click on ask I about this stage, we can add possibility to continue discuss with IE about this stage and or whatever.

Moish Tov • 13:30

Share, e.g. , the screen.

Stepan Fityo • 13:38

You want to share your screen? Yeah, sure, if you want.

Moish Tov • 13:56

So, this is this is the this is the file with the question that you should ask and to start with the level one question and calling it to level two and level three and each one of the questions do you send me this file? Yeah, yes, but you have some I've just checked, but I forwarded it into you, but you have it yeah so each of the questions is uh allocated to the right age bracket. Now, I sent only a sample of the questions. Total questions are about 14,000, but I sent only samples so we can put the sample in the so when you're on the GPS it will show you the question that I want to ask for present and questions that I want to ask for future.

Moish Tov • 15:40

І після того, як ви пройшли, ви ділилися від левелу 1 до левелу 2, до левелу 3, і потім ми маємо ай-бот. Угу. Я би його розкривав...

Moish Tov • 16:06

Technology term as much I know technology. The AI bot will have autism LLM. So we will teach the bot everything about autism. So the bot know autism. On top of it, there is one more layer on the LLM. And the 2nd layer is the question that you should ask. Because if you think about how do we use AI, okay, we get the screen and a prompt, and we have to send something to the AI, so the AI will know what we're asking.

Moish Tov • 16:59

What we created over here is instead of the parents need to know, I need to ask this question or other question, which usually they don't know, this is the prompt for the AI bot, so he knows the question that the parent is asking. And we took it only three levels, so after three levels, the AI know the profile, you know the autism, and know the question, so it can give you the best answer. Did I explain it in a way that understood? No, okay. I have to try it again.

Moish Tov • 18:09

Друга ідея питання, що батьки для когось на спектру не знають, що запитати. І вони мають навікувати багато різних речей.

Moish Tov • 18:21

Вони підуть до лікаря, а вони не знають, що запитати. Вони підуть до школи, до зустрічі, а вони не знають, що запитати. І потім їхня життя стає більш і більш складною, бо всі не є чинними. Якщо вони знають, що запитати, вони можуть бути готові до зустрічі. Вони кажуть, що мають запитати ці питання, а потім вони готуються до зустрічі, яка буде відбуватись. Якщо буде зустріч в школі, яку ми називаємо IEP, я хочу зустрітись до зустрічі. Якщо я не зустрічаюся до зустрічі, школа мені каже, що мій дитина не може навчатися, не робить нічого.

Moish Tov • 19:16

Якщо я зустрічаюся до зустрічі, і я знаю, про що ви питаєте, то я отримаю відповідь, яку вони хочуть від зустрічі. Це практична розповідальність про питання, яке ви хочете запитати. Інші практичні речі про це є, що в США...

Moish Tov • 19:43

The regulation or the law for school is based on the town, city that you live. And then there is another law that it is the state that you live. And then there is a federal law. So if we try to give an answer for everything, that's going to be a lot of content and going to be very different from one city to the other.

Moish Tov • 20:15

So the way that we overcome it, we said, okay, we will not give the answer. We'll tell you what the question. Could the question that a parent for a child with autism in New Jersey is the same question that someone is going to ask in Canada or someone going to ask in California? It's the same question. The answer might be different, but it is the same question. So to overcome this complexity, we came with a concept that's called question that you want to ask. That's the practical level of it.

Moish Tov • 20:57

The technical level of it is because we have today AI and we can teach AI different things. And that is, Sefan, you showed us the idea about this AI bot, which we have to give it a name. If we teach it about autism and teach it about the question that you have to ask, and then he learns about the profile. So now he knows this is the individual. This is what I know about autism. Based on the age or the event, I know what the questions are. Now it is much more focused and give you the answer or the option based on where you are, how old is your child, and whatever event you want to be prepared to.

Moish Tov • 22:01

Did that make sense?

Stepan Fityo • 22:04

Yeah, I understand. Yes, it makes sense. Yeah, sure.

Moish Tov • 22:11

So this file is important, and we have to show it. The GPS is built based on that and the profile.

Stepan Fityo • 22:24

Yeah, it makes sense.

Moish Tov • 22:27

And the one thing that I added to that is why. Why do so? The parent said, why do I need to ask this question? So there is one column over there that said, okay, why this question is important. So, I think that now we have to integrate this file into the demo, the pilot that you showed me, so we can show that. Because this is the main component of all this application, the question that you ask. Technically, it's being called SQM, small question model, in opposed to large language model.

Moish Tov • 23:31

That's the technicality of it. Makes sense?

Stepan Fityo • 23:38

But also, we still have this tree view. It's like journey view, yes, for this question. Yeah. We still keep this GPS view. Okay. Okay.

Moish Tov • 23:54

Yeah. The question is based on the age based on that we show in the GPS.

Moish Tov • 24:08

Є колумба Age or Trigger, вона каже Age 2-8, або школа через 20 років, або є якісь речі, які не відповідальні на Age. Тобто у колумбі є Age or Trigger, який є на мапі, який ви зробили. Я вважаю. І я намагаюся показати, що є якісь, які є відповідно на рік, а інші, які можуть відбуватися в різних роках. Тобто, в них немає рік-специфічної публіки, наприклад.

Stepan Fityo • 25:04

Немає рік-специфічної, я бачу.

Moish Tov • 25:06

Так, це може відбуватися на рік 10, а може відбуватися на рік 15. Ми не знаємо, коли це відбувається. Тобто, тут є два типи питань. Одна відповідає на рік, а інша не відповідає на рік.

Stepan Fityo • 25:25

And level, it's uh it's uh it's next level what you choose on level one, it's just on level two. Yes, how we understand this question.

Moish Tov • 25:39

Yes, so we tell you: okay, this is question number one. You go to level two, we show you three questions. You can select one of those, it will take you to level three, and after level three, the bot, the AI bot, is the one that gives you the content, the answer, or whatever you need to be prepared based on the question.

Stepan Fityo • 26:20

And also a level bot which suggests only on one stage or only or after select all questions for all stages for all age. We can suggest both variants, I think.

Moish Tov • 26:35

Yeah, that's a good point. It's a good point. And maybe we should, if we can do it on any level, maybe that will be better.

Stepan Fityo • 26:48

Okay. I see. Okay, I see.

Moish Tov • 26:57

I see. Should I resend this, Olga?

Stepan Fityo • 27:03

Yes. No, no. Ola already sended me. Yeah, I don't know why I miss it because, but anyway, maybe I just miss. Thank you for providing this file. A lot of work you did.

Moish Tov • 27:24

There is one other. One other thing that we need to add, and this is, I call it onboarding. This is like the 1st time that someone is starting to work with a system. So they have to get information about child age, all this kind of questions that get the profile done. So someone new getting into the application needs to get this information in. So I call it onboarding. Now, in reality, the one that's going to do it is the mother.

Moish Tov • 28:28

So we have to make it as simple as possible. And the thing that you showed us already, this functionality exists, because you create upload document, upload image, so it exists already, the functionality. I think that we need to think about when you do a setup, maybe we need to have a small menu or the handbooker on the top right. So when you set up the system for the 1st time, it helps you to go through that. And the functionality that you have right now, it's enough for the pilot. I can upload document here, I can take an image. So you showed us this functionality.

Moish Tov • 29:27

It's just that I want to be accessible in two different ways. One, 1st time I start the system, I need to get all my information in. We want to make it very easy and we want to show it. So it won't be like, okay, application is nice, but it will take me a lot of time to get all the information in, so I will not use it.

Stepan Fityo • 30:00

Yeah, I think we can integrate this also hamburger in navigation bar later if we see when we have more functionality and we need to feed all this functionality. It's no problem. It's okay.

Moish Tov • 30:16

And I think that the document needs to be part of the profile, not separate, because the documents are related to the individual. This is the document that you upload for the application.

Stepan Fityo • 30:34

So related to kit, yeah?

Moish Tov • 30:37

Yeah. So it's M the information hub is the profile. So if we call in the profile information hub, then we're good. Okay, then we're good.

Stepan Fityo • 31:05

Yeah, yeah, yeah. It's related to kids. Yeah, it's related to kids.

Viktoria Galas • 31:11

Just my one update: we need to remove word medical information, add information to improve your profile. Remove this medical. Not from here, the profile completeness percentage. Let's remove word medical.

Moish Tov • 31:36

Okay. We don't want to use the word medical.

Viktoria Galas • 31:41

At least in this bar, I mean the profile completeness. There is add medical info to improve your profile. I would recommend to remove medical, just keep add info.

Stepan Fityo • 31:54

Yeah, yeah, sure. Okay. Okay.

Moish Tov • 32:01

But if it is If it is information about medication, allergies, which is right, how do we going to call it so the user will understand it?

Viktoria Galas • 32:17

Healthcare information.

Moish Tov • 32:20

Okay, so let's call it health.

Viktoria Galas • 32:23

Yeah, health information, something like that, but not medical.

Stepan Fityo • 32:27

Okay. Mark fan.

Olga Kubli • 32:31

Why medical is not allowed?

Viktoria Galas • 32:35

Because it takes us into this medical path, medical devices, you know, all this stuff. Let's it be something general.

Moish Tov • 32:46

We can call it health.

Viktoria Galas • 32:47

Yeah, and the other thing, this SOS button, you wanted to rename it to?

Moish Tov • 32:57

Yes, I thought about calling it a companion. So you can ask the question that you have. I'm open to ideas about how to call it because it is for emergency when or when you want to ask one question and you don't want to go through everything.

Olga Kubli • 33:46

So if you're thinking about naming the application, the companion, then I think that the button must have a different name. Oh no, like because the companion is everything, not just this emergency button.

Moish Tov • 34:11

Julia, I still don't have a good name for the application. In any case, we need to find some name to the AI bot, any name, your helper, or can give it a name, then that would be the name of this button. Okay. Like a lot of developers give a name to their bot, so it's going to be more human, less technical.

Olga Kubli • 35:14

Can the support help, AI help, AI support?

Moish Tov • 35:21

Yeah, so we're going to have two different types of support. There is one, the button support, but the other one is if someone wants to contact us. And I think that in the hamburger, there needs to be another support, which is actually going to support what we will provide, Бо я хотів, щоб матірка була комфортною, що якщо вона потребує допомоги, то є людина, з якою вона може розмовляти, а не тільки AI.

Moish Tov • 36:13

So that might be part of help or anything that we will call it when we're adding the top handbook and menu.

Olga Kubli • 36:27

So you want to have both one that is human and it's someone from your stuff and being responsible for this and one is AI.

Moish Tov • 36:36

Yes. Okay.

Viktoria Galas • 36:38

We can name it Ask Companion. It can't we know that the application is responding to us, right? So that's not something from outside, but this is companion who can ask you. So you are asking system.

Moish Tov • 37:05

Okay. It sounds good. Stefan. Yeah, yeah. It really looks nice. One point that I will echo, Victoria. What you showed us at the beginning, this is the mobile screen.

Moish Tov • 37:34

It looks like a mobile screen. So. And the 2nd one that you showed us is more like a desktop. So I will keep the mobile for the mobile and the other screen is more for desktop.

Stepan Fityo • 37:55

Yeah, yeah, just on the responsive version and why it's look very wide and look like desktop. But you, yeah, how mentioned you can open this link for on your personal phone and see how it's looked on your phone without this left side left bar with disruptors and border. But anyway, yeah, you can just try click on this open mobile version, it's all well, yeah.

Moish Tov • 38:39

Last comment. Home is where home is taking me if I click on home on the bottom.

Stepan Fityo • 38:52

Yeah, it's this one.

Moish Tov • 38:54

Okay. So I think that it needs to be home, then the info hub, then the guy did the GPS.

Stepan Fityo • 39:11

Yeah, I renamed this. I will rename because we just forgot to rename.

Viktoria Galas • 39:18

You know, one comment here and advice, give the background to the button, not only the highlight the borders, because for the people who do not recognize colors, it will be they will understand where they are. So, not only highlight the icon itself, make it enabled, but also give the background.

Stepan Fityo • 39:51

Yeah, we can do the yeah, okay. I can add fillet icon when you select this menu item.

Viktoria Galas • 40:02

For the implementation, we will take into account accessibility as well.

Moish Tov • 40:07

Yeah, yeah, it's looks fine. Looks good. The accessibility colours we can take care of it in the during the implementation. Good.

Olga Kubli • 40:31

Moish, I have a question. If that's about the boarding screen that you mentioned, when you will be speaking to the potential investor and you want to use the prototype at your presentation, do you want to give Kimoku the option to create the profile and to do it like on or just start from the home screen as everything is created?

Moish Tov • 41:08

We will start with the home screen. I think that what Stefan did is nice. We have two different individuals in different age, so we can show different things. So for the meeting, this is a demo. I might give someone the link so they can look into the demo, but it doesn't have to have the full functionality.

Olga Kubli • 41:49

Okay. Yeah, sure.

Moish Tov • 41:55

Stephen, very, very good. Very nice.

Stepan Fityo • 41:59

Thank you for your feedback and your suggestion. Awesome.

Viktoria Galas • 42:07

We have 15 minutes left. I would like to show you the presentation I created based on the doc on this.

Moish Tov • 42:20

That is one thing that I'm going in vicious circles because I look into it so many times and I don't even okay.

Viktoria Galas • 42:34

Yeah, so the 1st this design let me move it a bit.

Moish Tov • 42:44

So spectrum navigator, good. Yeah.

Viktoria Galas • 42:51

Yeah, that's for you to give your thoughts about it, and it's like you can always so yeah, that's more graphics, so not just plain text, which is more eye-captivated and can help to keep investors engaged rather than just read that. So actually, that's that's the same what you provide, just adjusted and presented in this format. So one family, thousands of decisions, no clear roadmap. Family must navigate multiple disconnected systems that were not designed around the journey. And here are the systems. The problem is not a lack of information. The problem is absence of trusted navigated system.

Viktoria Galas • 43:46

And the vision and mission. Then meet spectrum navigator. So we can add the screenshots. There are a lot of empty spaces, so we can fill in this way.

Moish Tov • 44:05

Or maybe this is what you have in slide four. Yes. So this visual is the whole system. So I think that if you can take this visual and put it in slide three, that explain what it is.

Viktoria Galas • 44:35

Okay. Okay. I will combine those two. Good. Zero friction family intelligent.

Moish Tov • 44:48

So this is the onboarding.

Viktoria Galas • 44:51

Yep.

Moish Tov • 44:52

Okay, so it's like this is a mom. You know what mom is. Very busy all the time, organized thinking about okay, what she has to do in the next half an hour. So you know what mom is. So the zero friction is to give the mother comfort level that it's easy, very easy. The mother is the buyer, the mother is the one to make a decision, so everything needs to be around her. So the idea of the zero friction family is getting the information in as easy as possible.

Moish Tov • 45:39

So not anything that the mother has to worry about. And Stephen already showed us different functionality for that. So we can maybe add over here one of the screenshots.

Viktoria Galas • 45:57

Yeah, absolutely. Absolutely. We can add the screenshots. The innovation behind the spectrum navigation. So we have companion question intelligence, small question model, autism intelligence layers, and foundation AI models.

Moish Tov • 46:18

So I think that the small question model and the question intelligence is the question intelligence is what we call the information hub. So if you can replace, leave the small, no, the small question is on top of the autism intelligence layer and replace the question intelligence with the information.

Viktoria Galas • 46:59

Sorry, could you repeat? So, question intelligent replace information hub. Okay. Mention hub. Yeah. Why spectral navigation can stay the market leader? So here, probably we have we can add some more diagrams or screenshots.

Moish Tov • 47:55

I think that this screen needs to maybe you have to do it in two slides, but one is to say, okay, why what we're doing is new and give the benefit or what the benefit. And 2nd is talking about the market competition. Google is Competition, any charging PT is competition like a competitors comparison metrics, something like that.

Viktoria Galas • 48:42

Okay, yeah, okay, got it.

Moish Tov • 48:46

And then goes just go back to slide seven. This slide needs to be about the benefit. Okay. So it is what we're doing, which is what you wrote, but then we have to say, okay, the benefit, saving time, and reducing stress. So it's like a few benefits to add to the to that. And then you do the slide of the competitors the way that you suggested.

Viktoria Galas • 49:28

Okay, let's do this way. So here I'm adding benefits.

Viktoria Galas • 49:40

І на слайд 8 я додам компетенційну матеріку. Добре. Створення місця. Це про модель рівень.

Moish Tov • 50:16

Тому ми маємо показати, що під моделем бізнесу є місце, тобто близько 10 мільйонів сімей. Це є повністю місце. Бізнес-модель треба говорити про підтримки. У нас є три типи підтримок.

Viktoria Galas • 50:47

Ага.

Moish Tov • 50:54

Okay, in the business model, we have two revenue streams: one coming for the membership that has three levels, and then from the marketplace that people will buy advertisements.

Viktoria Galas • 51:21

Okay, I will add that to Yeah, I have this information. So that's an investment opportunity. Here, probably we need just a probably table with some our plans, like for the time. Probably Olia can give me this information what we are planning time-wise, money-wise.

Moish Tov • 52:05

The file with numbers? Five-year numbers. Yeah.

Olga Kubli • 52:10

Yes, I will add everything. Yes, and I already asked the developer to prepare the estimates on timing of the development, how it will be done. He did it, but I in absolutely different style. So, yeah, Victoria, we will need to unify it to the one structure from the structure with the knowledge that he likes it this way, and then we can add everything in this style.

Viktoria Galas • 52:39

Yeah, I have the business model mentioned here. However, I think it makes sense to move it to this market, building the market, right?

Moish Tov • 52:49

Yeah.

Viktoria Galas • 52:51

Okay, I will do that. Yep, that can be I will think. I will I will take a look to the information it can be the table. With FTs and money, yeah, and everything.

Moish Tov • 53:48

Good. It looks very nice.

Viktoria Galas • 53:53

Thank you. Yeah.

Moish Tov • 53:55

I like the white background. It's very nice.

Viktoria Galas • 54:08

Thank you.

Moish Tov • 54:09

Really nice.

Olga Kubli • 54:11

Much and it will help you as your executive summary. Will it help you?

Moish Tov • 54:19

That, of course.

Olga Kubli • 54:21

Perfect. That's what I wanted. Okay. Thank you.

Moish Tov • 54:25

I have the meeting in seven days.

Olga Kubli • 54:27

Yeah.

Moish Tov • 54:30

The 1st meeting.

Viktoria Galas • 54:32

The 1st meeting.

Moish Tov • 54:33

They're going to be more. But it looks very good, guys. Really. Thank you very much. It looks much more than I ever expected.

Stepan Fityo • 54:49

So, really, thank you. Great to hear this.

Olga Kubli • 54:53

Yeah. Yeah. Thank you guys.

Moish Tov • 54:56

Okay. So enjoy wherever you are.

Viktoria Galas • 55:03

Thank you.

Moish Tov • 55:04

Okay. You too.

Stepan Fityo • 55:06

You too.

Olga Kubli • 55:07

Moish, I'll be back. I'll write just find the place with air condition.

Stepan Fityo • 55:18

Hopefully, my weather is not necessary to condition because now we have maybe I don't know 20 degrees Celsius. It's not warm.

Moish Tov • 55:29

Okay. But yeah, it's one size. Okay.

Olga Kubli • 55:36

Cool.

Moish Tov • 55:37

Thank you guys.

Olga Kubli • 55:39

Yeah. Thanks. Have a good one.

Stepan Fityo • 55:41

Thank you too. Bye.

Olga Kubli • 55:43

Bye. Bye.

Moish Tov • 55:54

How are you doing?

Olga Kubli • 55:57

What? How are you doing? Good. Good. Yeah, she's with your cousin and two grandmas. Yeah.

Moish Tov • 56:05

Where are you now?

Olga Kubli • 56:07

We are in Spain. We came yesterday. Look at the view.

Moish Tov • 56:16

Barcelona?

Olga Kubli • 56:18

Yes, but yes, it's like 30 kilometers up from Barcelona. So I'm leaving Guerra here with her cousin and two grandmas and going to Ukraine tomorrow, starting my way to Ukraine.

Moish Tov • 56:34

Okay. Have a safe trip.

Olga Kubli • 56:41

Oh, my shit. I hope. I hope. I promised everyone. Yeah, to follow all the necessary things that I need to do to stay safe.

Moish Tov • 56:54

Okay. When are you combat?

Olga Kubli • 56:58

Well, August. In August, then I need to come here to pick up Giera. Yes, so it's not close. I will text you the moment. I'm in Ukraine because I missed you and I want to meet you. I'm happy that you liked everything. We'll work on it further and I'll send you it to you.

Moish Tov • 57:20

That's good. Thank you.

Olga Kubli • 57:23

Thank you.

Moish Tov • 57:24

Bye. Bye.
